- Agilent N9320B RF Spectrum Analyzer
- 9 kHz to 3.0 GHz
  - Data Sheet

### **Definitions and Conditions**

The spectrum analyzer will meet its specifications when:

- It is within its calibration cycle
- It has been turned on at least 30 minutes
- It has been stored at an ambient temperature within the allowed operating range for at least two hours before being turned on; if it has been stored previously at a temperature range inside the allowed storage range, but outside the allowed operating range

"**Specifications**" describe the performance of parameters covered by the product warranty and apply to the full temperature range of 5 to 45 °C, unless otherwise noted.

**"Typical**" values describe additional product performance information that is not covered by the product warranty. It is performance beyond specifications that 80 percent of the units exhibit with a 95 percent confidence level over the temperature range 20 to 30 °C. Typical performance does not include measurement uncertainty.

"**Nominal**" values indicate expected performance, or describe product performance that is useful in the application of the product, but are not covered by the product warranty.
