Agilent V2820A RF Vector Signal Analyzer

400 MHz to 4 or 6 GHz

Technical Overview

Applications

• MIMO derived research
• Commercial OFDM development and verification
• 802.11n WLAN design validation

The V2820A RF vector signal analyzer provides extensive and unique capabilities for signal analysis of devices that use both existing wireless standards and new wide bandwidth, complex modulation, high throughput wireless communication standards. The V2820A’s wide signal capture bandwidth enables measurements of wideband signals such as 802.11n 40 MHz WLAN, and a DSP-based software-defined radio (SDR) architecture gives it the flexibility to easily adapt to new wireless technologies. The SDR-based design maximizes the life of the V2820A and provides an ongoing return on investment compared with more traditional signal analysis instruments.
Unique capabilities substantially reduce signal acquisition and measurement times.

In addition to allowing both manual and automated control through the traditional built-in microprocessor instrument controller, the V2820A offers the ability to bypass the internal controller and permits a PC to act as the instrument controller. This enables transfer of IQ data over USB at data rates exceeding 100 Mbits/second and is essential for high-speed data acquisition and measurement of wireless devices such as femtocells.

High-quality measurements not compromised by high-speed testing

While the V2820A has been optimized for high-speed test performance, it also delivers excellent measurement performance. Superior phase noise performance with the V2820A-UPN ultra low phase noise option provides a \(-42\) dB EVM floor for a 40 MHz bandwidth 802.11n signal at 5.6 GHz. Even without the enhanced phase noise option, the EVM floor is \(-40\) dB. Similarly, WiMAX™ relative constellation error (RCE) floor levels exceed \(-42\) dB to 3.5 GHz. The dynamic range of EDGE Evolution Output RF Frequency Spectrum (ORFS) due to switching is 80 dBc at a 1800 kHz offset from the carrier.

The wide bandwidth of the V2820A can capture a complete 40 MHz WLAN or WiMAX signal in a single acquisition, eliminating any need to make multiple signal captures and to concatenate signal segments, therefore avoiding the resulting degradation in measurement accuracy. Also included as a standard part of the signal analyzer is the pre-amp, which lowers the V2820A’s noise floor by as much as 15 dB.

The V2820A measures channel power on single-carrier standards with ±0.6 dB typical accuracy and multi-carrier standards signals, such as WLAN and WiMAX™, with ±0.85 dB typical accuracy. These accuracy levels combined with ±0.15 dB amplitude repeatability enable test engineers to design test protocols with the tight tolerances needed to ship the highest quality products.

Test MIMO devices with low instrument uncertainty

Each V2820A is designed to be synchronized to other V2820As, enabling the capture of multiple transmission streams with an extremely high level of synchronization. Signal acquisition synchronization jitter is \(\leq 250\) ps, ensuring that time delays between signal streams are due to transmitter issues or channel conditions and not due to instrument latency. MIMO device designs can be tested during development with a high degree of confidence that the V2820A is not contributing offset errors to the multiple signal stream acquisitions.

Agilent MIMO configurations that include V2820A instruments can test MIMO devices with up to eight antennas. System synchronization is ensured by the V2895A MIMO synchronization unit. This instrument distributes a common local oscillator, a common clock signal, and precise trigger signals to all the system’s signal analyzers.

Using the V2901A SignalMeister integrated RF signal analysis and generation toolkit software and V2920A RF vector signal generators, MIMO signals can be both easily generated and analyzed. Furthermore, all the synchronization, designation of master and slave units, and control of multiple instruments is managed by the SignalMeister software and transparent to the user. SignalMeister allows the generation of MIMO WLAN, WiMAX, and HSPA+ signals for testing MIMO receivers as well as for analysis of MIMO transmitters. An Agilent MIMO system with SignalMeister software makes it very easy to conduct multi-antenna research and test MIMO device designs.

Agilent MIMO test systems provide superior test performance, system flexibility, and unparalleled ease of use that are unmatched in the industry. Refer to the MIMO technical overview, literature number 5990-5493EN for further information.
Figure 1. Easily configure a 2x2 to an 8x8 MIMO system and obtain excellent signal sourcing synchronization and signal acquisition synchronization for testing MIMO devices. SignalMeister software makes creating a MIMO test protocol.

Figure 2. Use SignalMeister software to create two signal streams with transmitter impairments to test a 802.11n WLAN MIMO receiver. Similarly, SignalMeister can program two analyzers to acquire output streams from a MIMO transmitter.

Figure 3. SignalMeister software creates a wide range of computations and plots for MIMO analyses. Display selections are easily arranged to create a desired presentation. The analysis shown is on 802.11n transmission.
Fast, accurate and flexible for femtocell applications

Production test engineers have the option of using a number of configurations of the instrument to optimize test system performance and simplify test system connections. In addition to front and rear panel configurations, the single port input option, V2820A-SPI, allows the analyzer to connect directly with a single port wireless device such as femtocells, to provide both RF sourcing and RF measurement without requiring switching between the measurement devices and the device-under-test. The single port input option includes a broadband coupler integrated into the V2820A. An RF source connects to the V2820A and the V2820A connects directly to the DUT. The integrated coupler’s path losses are fully calibrated as part of the V2820A’s factory calibration so that additional test system calibration procedures, required if an external coupler is used, are not needed.

The V2820A RF vector signal analyzer enables fast switching between multiple standards and can perform an extensive set of RF measurements, including power calibration measurements, as required for femtocell testing. Channel power list mode allows setting up a pre-defined list of frequencies, measurement bandwidths, and measurement times, enabling fast transmitter output power measurements.

Figure 4. (Left) Connect directly to a transceiver or mobile handset without switching using the single port input option, V2820A-SPI of the V2820A, which features a built-in broadband coupler that is fully calibrated at the V2820A’s input terminal. (Right) The channel power list mode captures transmitter declining-power ramps at multiple frequencies for fast transmitter calibrations of femtocells.

Figure 5. (Left) Test femtocells and access points that operate on multiple standards. Agilent vector signal analyzers and vector signal generators can quickly switch between standards for fast testing of all access point functionality. (Right) Example analysis of an access point transmitting an HSPA+ signal.
Product Specifications

Specification definitions and conditions

Specifications (warranted performance):
Specifications describe the instrument’s warranted performance. All units are warranted to meet performance specifications under the following conditions:
• Ambient operating temperature of 18 to 28 °C, unless otherwise noted
• After specified warm-up time of 30 minutes and self calibration at ambient temperature

Note: All items are specifications unless otherwise noted.

Typical (mean +3 standard deviations):
Typical indicates performance that units will meet under the following conditions:
• Ambient operating temperature of 23 °C, unless otherwise noted
• After specified warm-up time of 30 minutes and self calibration at ambient temperature

This performance is not warranted.

Nominal values indicate expected performance, or describe product performance that is useful in the application of the product, but is not covered by the product warranty.

This performance is not warranted.

Modes of operation

Standard spectrum analysis modes and measurements
• Spectrum analyzer (power envelope amplitude versus frequency spectrum)
• Zero span (power envelope amplitude versus time)
• ACPR (adjacent channel power ratio bar chart)
• Channel power list
• Spectrum Emissions Mask (SEM)

Optional vector signal analysis modes
• GSM-GPRS-EDGE
• EDGE Evolution
• cdmaOne–cdma2000®
• W-CDMA FDD uplink (mobile phone transmitter signals)
• W-CDMA FDD downlink (base station transmitter signals)
• 802.11a, b, g, j, and n WLAN (SISO signals)
• 802.16e-2005 WiMAX (SISO signals)
• Generic FSK and PSK signals
• HSPA and HSPA+

Note: All items are specifications unless otherwise noted.

Frequency

Frequency range:
V2820A-504: 400 MHz to 4.0 GHz
V2820A-506: 400 MHz to 6.0 GHz

Frequency setting resolution: 0.1 Hz

Frequency accuracy: Same as frequency reference + synthesizer resolution term

Frequency switching speed:
V2820A-UPN: 250 µs
V2820A-UPN: 1.05 ms
**Internal frequency reference**
- Aging rate: \( \leq 1 \text{ ppm/year} \)
- Temperature stability: \( \leq 0.2 \text{ ppm}^5 \) (nominal)

**Frequency reference output**
- Impedance: 50 W (nominal), AC coupled
- Reference output signal: 10 MHz, +7 dBm ±3 dB (nominal)

**External frequency reference input**
- Frequency lock range:
  - Hardware lock mode: 10 MHz ±10 Hz (1 ppm) input frequency lock range
  - Variable input frequency mode: 1 to 60 MHz
- Amplitude lock range: -3 to +15 dBm
- Impedance: 50 Ω (nominal)

**Spectrum analysis controls and parameters**
- Frequency span:
  - V2820A-504: 200 Hz to 3.6 GHz
  - V2820A-506: 200 Hz to 5.6 GHz
  - Zero span mode available
- Sweep time settings in zero span mode: 1 μs to 30 s
- Sweep modes: Continuous, single
- IF bandwidth:
  - Relative flatness over 20 MHz: ±1.0 dB (typical)
  - Relative flatness over 4 MHz: ±0.5 dB (typical)
  - 3 dB BW: >30 MHz (typical)
  - 6 dB BW: >38 MHz (typical)
- Resolution bandwidths: 1 Hz to 3 MHz (ENBW) with 1 Hz resolution for spans >0 Hz
- Resolution bandwidth filters (1 Hz resolution):
  - Brickwall: 10 Hz to 35 MHz, flat BW
  - Root raised cosine \( \alpha = 0.22 \): 10 Hz to 28 MHz, 3 dB BW
  - Gaussian: 10 Hz to 7 MHz, 3 dB BW
  - 5 pole synchronously tuned: 10 Hz to 2.3 MHz, 3 dB BW
  - 4 pole synchronously tuned: 10 Hz to 1.75 MHz, 3 dB BW
- Amplitude:
  - Reference level range setting: +40 dBm to -170 dBm
  - Scale settings: Manual: 0.1 dB/division to 40 dB/division
- Pre-amplifier: On, off
  - 400 MHz to 2.5 GHz (nominal gain 15 dB)
  - 2.5 GHz to 4.0 GHz (nominal gain 20 dB)
  - 4.0 GHz to 6.0 GHz (nominal gain 18 dB)
- Display:
  - Detection modes: normal, maximum, minimum, sample, power average, power average + noise correction
  - Trace hold displays: normal, max hold, min hold, min/max hold
- Averaging: 1 to 1,000 traces
- Modes: Log, power, log group, power group, max group, min group, min/max group
- Markers: 4 independent markers, each with a delta marker, normal and peak modes
  - Marker amplitude resolution: 0.01 dB from front panel, 0.001 dB via remote interface
- Channel power list: single command to execute up to 501 power measurements
Spectrum analysis amplitude

Maximum safe input power: +35 dBm
Maximum safe voltage DC voltage: ±50 VDC

Absolute accuracy (typical)
- 325 MHz to 400 MHz: 0.2 dB (nominal)
- 400 MHz ≤ Freq ≤ 2000 MHz: ±0.6 (±0.2) dB
- 2,000 MHz < Freq ≤ 6,000 MHz: ±0.8 (±0.3) dB
- 6,000 MHz < Freq ≤ 6,500 MHz: ±5.0 dB (nominal)

Ref level accuracy (referenced to 0 dBm):
- +10 to −75 dBm: ±0.2 dB
- −75 to −100 dBm: ±0.6 dB

Display scale fidelity:
- ±0.2 dB

Attenuator accuracy:
- Frequency < 2.5 GHz: ±0.1 dB for 5 through 20 dB attenuator settings
- ±0.15 dB for >20 dB attenuator setting.
- Frequency ≥ 2.5 GHz: ±0.1 dB for 5 through 10 dB attenuator settings
- ±0.2 dB for 15 through 25 dB attenuator settings
- ±0.25 dB for 30 dB attenuator setting

Amplitude repeatability:
- ±0.15 dB (±0.07 dB typical)

Amplitude change due to preamp on:
- ±0.2 dB (±0.15 dB typical)

Displayed average noise level:
- ≤ −140 dBm/Hz, pre-amp off (F ≤ 2500 MHz)
- ≤ −138 dBm/Hz, pre-amp off (2500 MHz < F ≤ 4000 MHz)
- ≤ −128 dBm/Hz, pre-amp off (4000 MHz < F ≤ 6000 MHz)
- ≤ −150 dBm/Hz, pre-amp on (F ≤ 2500 MHz)
- ≤ −148 dBm/Hz, pre-amp on (2500 MHz < F ≤ 4000 MHz)
- ≤ −143 dBm/Hz, pre-amp on (4000 MHz < F ≤ 6000 MHz)

VSWR:
- ≤1.4:1 (nominal)

Spurious and residual responses

TOI (referred to the RF input, two 0 dBm input signals and reference level = 0 dBm):
- F < 2325 MHz = +35 dBm (nominal)
- F ≥ 2325 MHz = +34 dBm (nominal)

SOI (referred to the RF input, 0 dBm input signals and reference level = 0 dBm):
- +50 dBm (nominal)

Residuals (reference level setting ≤ −40 dBm), pre-amp on:
- ≤ −95 dBm

LO related spurs:
- ≤ −65 dBc
Standard and option V2820A-UPN phase noise

F carrier = 1000 MHz SSB Phase Noise

F carrier = 2000 MHz SSB Phase Noise

F carrier = 3000 MHz SSB Phase Noise

F carrier = 4000 MHz SSB Phase Noise

F carrier = 5000 MHz SSB Phase Noise
**Generator output**

Frequency range\(^{21}\): 400 to 2500 MHz  
Sweep span\(^{22}\): 0 to 2100 MHz  
Sweep points: 1 to 501  
Dwell setting: 1 ms to 1 s in 1 ms increments  
Amplitude: fixed: -18 dBm +5.0 dB (typical)

**Supplemental speed information**

Trigger and synchronization inputs and outputs

Trigger sources:
- Free run
- External
- Video
- Bus
  - External arm using video trigger
  - Bus arm using external or video trigger
- Latched external

Trigger delay range: –30 to +30 seconds

Trigger modes:
- On measurement
- On acquire

External trigger:
- Selectable on rising or falling edge of external input
  - Input level TTL
  - Minimum input pulse width required 50 ns (nominal)

Video trigger modes:
- Selectable on rising or falling signal edge
  - Video level
  - Pre-qualification mode level and time settings

Sync output modes:
- Generate a sync pulse:
  - Off
  - Begin measurement
  - Start tune
  - Ready acquire
  - Start acquire
  - End acquire
  - End measurement

Sync output polarity select: Sync out is on the falling or rising edge

Sync output: TTL level; minimum pulse width 200 ns (nominal)

Even second clock input: external even second clock (TTL)

Even second clock output: external even second clock (TTL)
General specifications

Power: 100 VAC to 240 VAC; 50/60 Hz (automatically detected); 150 VA max
CE EMC compliance: compliant with the European Union EMC Directive
CE safety compliance: compliant with the European Union Low Voltage Directive
Calibration: Annual calibration cycle in system

Environment (for indoor use only):
- 18 to 28 °C specified operating, unless otherwise noted
- 0 to 50 °C operating survival, non-specified operation
- −25 to 65 °C non-operating (AC power off) storage
- Altitude: 2000 meters above sea level maximum specified operating

Cooling: Forced air top, bottom, and side intakes and rear exhaust. For proper cooling in a rack, use rack mount kit V2820A-1CM

Digital inputs/outputs: 4 bits, TTL-compatible
Interfaces: IEEE-488.1 compliant. Supports IEEE-488.2 common commands and status model topology
- LAN: 10/100BT Ethernet, RJ45, LXI class C, no auto MDIX
- IVI-COM
- USB: USB full speed
- RF in/TG out: Type N connector

Mechanical vibration and shock:
- MIL-PRF-28800F CL3 random vibration, 3 axes
- Sine-sweep test for resonances, 3 axes
- MIL-STD-810F 516.5 paragraph 4.5.7, procedure VI, bench handling

General mechanical characteristics:
- Height: 3 U, 133 mm (5.25")
- Width: Half-rack 213 mm (8.4")
- Depth: 464 mm (18.25")
- Weight: 7.5 kg (16.5 lbs)
- Warranty: 1 year
Notes
1. Over range operation provided: 325 MHz to 4.0 GHz. Performance below 400 MHz is not specified.
2. Over range operation provided: 325 MHz to 6.5 GHz. Performance below 400 MHz and above 6.0 GHz is not specified.
3. Synthesizer resolution term: \( \leq 20 \mu \text{Hz} \).
4. From sync out on start tune to within 0.1 ppm of final value.
5. Total variation from 0\(^\circ\) to 50 \(^\circ\)C ambient temperature range.
6. Factory preset setting.
7. On 10 Hz boundaries \( \text{Freq} = 1 \text{ MHz} + n \times 10 \text{ Hz} \). Reference accuracy: \( \leq \pm 1 \text{ ppm} \). Sine or square wave inputs acceptable.
   Lock time may be up to 30 seconds.
8. Over range operation provided: Maximum span is 3.675 GHz. Performance below 400 MHz is not specified.
9. Over range operation provided: Maximum span is 6.175 GHz. Performance below 400 MHz and above 6.0 GHz is not specified.
10. Maximum sweep time is limited to 32 MS data points.
11. Flatness across a given measurement span is the sum of IF flatness and RF flatness.
12. RBW accuracy <1% nominal.
13. Filter types are settable in zero span, channel power list, and ACPR modes.
14. Filter is raised-cosine type, alpha = 0.091. ENBW and 6 dB BW is 1.1 * RBW setting.
15. CDMA and W-CDMA measurement personalities limit number of trace averages to 100.
16. Specifications apply when autocoupled unless otherwise stated.
17. Input power at 0 dBm, span = 1 MHz and RBW = 100 Hz.
18. Signal level within 60 dB of top of screen, reference level 0 dBm, no change in instrument state.
19. Applies only if input attenuator is changed from auto-coupled setting.
20. For repetitive CW power readings with read signal removed then reapplied for signals: >40 dB above noise floor within 5 minutes.
21. For option V2820A-SPI, 1 dB degradation of performance across all frequency bands with preamp on and off.
22. Over range operation provided: 325 MHz to 2.7 GHz. Performance below 400 MHz and above 2.5 GHz is not specified.
23. Over range operation provided: Maximum span: 2.375 GHz. Performance below 400 MHz and above 2.5 GHz is not specified.
24. General test conditions: fast mode on, noise correction off, range check off, randomize start off, background tasks off, display off.
25. Except where noted, GPIB is used.
26. Using the V2820A Desktop Control Panel software running on a Windows\textsuperscript{\textregistered} XP, 3.4 GHz, IBM-compatible desktop PC.
27. Instrument preset, all settings auto coupled: 300 kHz \( \leq \text{span} \leq 300 \text{ MHz} \). In zero span, sweep time \( \leq 5 \text{ ms} \) and 1 MHz BW. Time is trigger to data available.
28. 100 \( \mu \text{s} \) sweep time, 3.84 MHz BW, RRC filter.
29. 101 point list, 400 \( \mu \text{s} \) acquisition time, \( \geq 1 \text{ MHz} \) BW, brickwall.
30. \( \leq 50 \mu \text{s} \) acquisition time, \( \geq 1 \text{ MHz} \) BW, brickwall.
31. Single burst, no averaging.
32. Single burst, no averaging.
33. Parameters measured: Rho, code domain power, RMS EVM, peak EVM, peak code domain error, frequency error, IQ offset, and total channel power.
34. 500 \( \mu \text{s} \) sweep.
35. To preset condition accuracy, display off.
36. Measured with general purpose SEM measurement, channel sweep time = 100 \( \mu \text{s} \), number of averages = 1, measurement mode = sweep.
37. Parameters measured: Code domain power, RMS EVM, peak EVM, peak code domain error, frequency error, IQ offset, and total channel power.
38. 100 \( \mu \text{s} \) sweep.
39. To preset condition accuracy, display off.
40. Measured with general purpose SEM measurement, channel sweep time = 100 \( \mu \text{s} \), number of averages = 1, measurement mode = sweep.
41. Parameters measured: Code domain power, RMS EVM, peak EVM, peak code domain error, frequency error, IQ offset and total channel power.
Notes (continued)
42. 100 µs sweep.
43. 100 averages.
44. Measured with general purpose SEM measurement, channel sweep time = 100 µs, number of averages = 1, measurement mode = sweep.
45. Parameters measured: Code domain power, RMS EVM, peak EVM, peak code domain error, frequency error, IQ offset, and total channel power.
46. 802.11b waveform with 504 chips, mean of 100 iterations, plots turned off, no frequency change, measurements include 4 EVM values, channel power, and 4 additional parametric measurements.
47. FFT Size: 1024, channel equalization: Chan Est Seq+Pilots, mean of 100 iterations, plots turned off, no frequency change, measurements include 4 RCE values, channel power, and 5 additional parametric measurements.
49. Zero span, sweep time 100 µs, binary data transfer, 501 data points.
50. Display off, MEAS1;INIT;IMM;*WAI;;MEAS2;INIT;IMM;*OPC.
51. Average of peak from each burst.
52. Average of peak from each burst.
53. Nominal carrier power at RF input ≥–10 dBm. Does not include level uncertainty due to inherent noise.
54. 1800 kHz offset measured using 100 kHz RBW. All other offsets measured using 30 kHz RBW.
55. 1800 kHz offset measured using 100 kHz RBW. All other offsets measured using 30 kHz RBW.
56. Pass/fail, complete burst with upper and lower mask limit lines.
57. Nominal carrier power at RF input ≥–10 dBm. Does not include level uncertainty due to inherent noise.
58. 1800 kHz offset measured using 100 kHz RBW. All other offsets measured using 30 kHz RBW.
59. 1800 kHz offset measured using 100 kHz RBW. All other offsets measured using 30 kHz RBW.
60. Nominal carrier power at RF input ≥–10 dBm. 32QAM R325 Normal. Does not include level uncertainty due to inherent noise.
61. 1800 kHz offset measured using 100 kHz RBW. All other offsets measured using 30 kHz RBW.
62. 1800 kHz offset measured using 100 kHz RBW. All other offsets measured using 30 kHz RBW.
63. Carrier power at RF input ≥–10 dBm. Does not include level uncertainty due to inherent noise.
64. Carrier power at RF input ≥–10 dBm. Does not include level uncertainty due to inherent noise.
65. Carrier power at RF input ≥–10 dBm. Does not include level uncertainty due to inherent noise.
66. Carrier power at RF input ≥–10 dBm. Does not include level uncertainty due to inherent noise.
67. Valid for CPICH only signal.
68. Carrier power at RF input ≥–10 dBm. Does not include level uncertainty due to inherent noise.
69. Carrier power at RF input ≥–10 dBm. Does not include level uncertainty due to inherent noise.
70. Test model 5 with 2 HS-PDSCH channels (HS channels are QPSK, 16QAM, or 64QAM).
71. Test model 5 with 2 HS-PDSCH channels (HS channels using 16QAM).
72. Carrier power at RF input ≥–10 dBm. Does not include level uncertainty due to inherent noise.
73. Carrier power at RF input ≥–10 dBm. Does not include level uncertainty due to inherent noise.
74. Applies when input signal is above –20 dBm, with Expected Channel Power set equal to input power.
75. Measuring 802.11n SISO signals when configured as the Master in a MIMO system configuration can degrade the EVM floor up to 3 dB.
76. Measuring 802.11n SISO signals when configured as the master in a MIMO system configuration can degrade the EVM floor up to 3 dB.
79. Applies when input signal is above –20 dBm, with Expected Channel Power set equal to input power.
82. Carrier power at RF input ≥–20 dBm. Does not include level uncertainty due to inherent noise.
83. Bus trigger and bus arm available only in channel power mode.
Ordering Information

**V2820A RF vector signal analyzer**
- V2820A-504 RF vector signal analyzer 400 MHz to 4 GHz
- V2820A-506 RF vector signal analyzer 400 MHz to 6 GHz

**RF connector options**
- V2820A-FPC front RF input connector
- V2820A-RPC rear RF input connector
- V2820A-SPI single port input connector

**Performance improvement options**
- V2820A-UPN analyzer ultra low phase noise option

**Signal analysis personality options**
- V2800A-101: Flexible digital modulation
- V2800A-102: GSM, GPRS, and EDGE
- V2800A-103: EDGE Evolution
- V2800A-104: cdma2000 and IS-95A reverse link
- V2800A-105: W-CDMA FDD downlink
- V2800A-106: W-CDMA FDD uplink
- V2800A-107: W-CDMA HSPA downlink
- V2800A-108: W-CDMA HSPA uplink
- V2800A-110: WLAN 802.11a-b-g-j-n SISO
- V2800A-111: 802.16e WiMAX and WiBro SISO

Contact your local Agilent sales representative for the latest information on new personalities and software.

**Optional software**
- V2901A: SignalMeister integrated RF signal analysis and generation toolkit
- V2901A-WMX: WiMAX signal analysis SignalMeister license
- V2901A-WLN: WLAN signal analysis SignalMeister license

**Accessories supplied**
- AC power cable, printed quick start guide, CD-ROM containing V2820A desktop control panel software,
- V2820A VSA system help, utility programs, and PDF files (also available online at [www.agilent.com/find/V2820A](http://www.agilent.com/find/V2820A))

**Accessories available**
- V2999A-BTK additional benchtop kit, handle and front-rear sleeve
- V2999A-1CM additional rack mount kit for 1 or 2 instruments
- V2999A-ADK RF cable and adapter accessory kit
- V2999A-DCB external RF-DC block module

**Services available**
- R-51B-001-C return to Agilent warranty – 1 year (standard)
- R51B-001-3C return to Agilent warranty – 3 years
- R51B-001-5C return to Agilent warranty – 5 years
- R-50C-001-3 Agilent calibration – 3 years

A personalized view into the information most relevant to you.

www.lxistandard.org
LAN eXtensions for Instruments puts the power of Ethernet and the Web inside your test systems. Agilent is a founding member of the LXI consortium.

Three-Year Warranty
www.agilent.com/find/ThreeYearWarranty
Beyond product specification, changing the ownership experience.
Agilent is the only test and measurement company that offers three-year warranty on all instruments, worldwide

Agilent Assurance Plans
www.Agilent.com/find/AssurancePlans
Five years of protection and no budgetary surprises to ensure your instruments are operating to specifications and you can continually rely on accurate measurements.
