About 15
Imprint 17
The novel product line TDEMI® eXtreme (short form: TDEMI® X) is the latest and most advanced level of full digital measurement equipment for emission testing on the fast lane. It is based on the unrivaled and well approved technology of GAUSS INSTRUMENTS.

By the use of the leading-edge analog-to-digital converters with the best ratio of signal to noise power density available on the market, most modern high-speed FPGAs with a calculation power of about 250 state-of-the-art PCs and in-house designed high performance microwave circuits highest measurement accuracy and highest measurement speed is achieved over the entire frequency range starting from 10 Hz up to 40 GHz.

The new TDEMI® eXtreme is easily upgradeable in its frequency range by different extensions which can be integrated into the instrument subsequently.

The frequency ranges are 1 GHz, 3 GHz, 6 GHz, 18 GHz, 26.5 GHz or 40 GHz respectively. The frequency ranges of the instruments start at 9 kHz by standard configuration and can be extended down to 10 Hz by the option Option MIL/DO-UG. A large variety of configurable options make the TDEMI® X to the customized solution perfect fitting to your application according to all civil standards (e.g. CISPR, EN, FCC, or ANSI), military (MIL-461) as well as avionic standards (DO-160). The TDEMI® X measurement system offers in its standard configuration a fully integrated spectrum analyzer mode and also a real-time spectrum analyzer mode. An overview of the available options is given on the page following to the detailed technical specification. Furthermore we offer a customized adaptation to your specific application and needs upon request.

The option OSC-UG provides a two-channel oscilloscope, extending the frequency range even down to DC. The new and highest performance product line TDEMI® X can be used in a vast range of applications due to its spectrum analyzer mode and real-time spectrum analyzer and can be used also for measurements according to telecommunication standards such as ETSI standards e.g. or for general analysis of signals - and all this can be done fully in real-time with an absolutely unique instantaneous bandwidth of 325 MHz and an unrivaled measurement speed and dynamic range of 100 dB (without attenuator) or even up to 170 dB with attenuator.

At a Glance

TDEMI® X

› 64 000 times faster than conventional instruments
› 100 dB
› multifunctional and upgradeable
› conventional and FFT-based leading-edge technology
Receiver Mode

The TDEMI® eXtreme provides a traditional superhet mode for sure, which is implemented fully digital in the frequency range up to 1 GHz. Above 1 GHz there is an ultra broadband down-conversion to the digital IF level, with a real-time bandwidth of 325 MHz. The instruments can be configured with an AM/FM demodulator and output to headphones (Option DM-UG).

Moreover the receiver mode of the TDEMI® X provides a full compliant Shortterm-FFT (STFFT) implementation, which speeds up your EMC measurements by a factor up to 16000. Thus scan times - and with it overall testing times - can be realized now which are much shorter and setting new standards in product certification. For example a full scan with quasi-peak detector in the range from 30 MHz to 1 GHz is carried out in less than 10 seconds.

So it is possible to measure and characterize fluctuating disturbances and equipment under test changing between different operation modes very easily and much more precise and reliable. An excellent noise floor makes the TDEMI® X perfect suited for radiated, conducted as well as measurements with absorbing clamp or CDN.

APD Function and Histogram

The measurement systems of the TDEMI® eXtreme series can be equipped with a measuring mode for the amplitude probability distribution (APD) and with a colored histogram display by the option APD-UG. The APD measuring function for example is used for testing of ISM (industrial, scientific, medical) equipment. Especially for such measurements like APD function the vast advantages of the most modern technology of the TDEMI® X become aware, when a highly parallel measurement and calculation is saving a huge amount in time and money.

Moreover the histogram function, by its color depth of 16.78 million, enables the user to analyse and distinguish intermittent narrow- and broadband disturbances as well as to detect masked signals very easily.
Real-time Spectrogram Mode

The real-time spectrogram mode of the TDEMI® eXtreme is absolutely unique in its performance and unique particularly because of the full conformance with the standards CISPR 16-1-1, ANSI C63.2, MIL-461, and DO-160 respectively. The real-time spectrogram offers the perfect combination of full compliance and analysis capabilities in fully gapless real-time, observing what is going on there in your circuitry, component, device or equipment under test.

The remote control feature via commands according to SCPI standard enables the use in fully automated lab and certification environment. Evaluation capabilities, e. g. several markers, display in 2D or 3D allow to analyse disturbances and evaluate them regarding to conformity. The measurement is carried out over a frequency range of 162.5 MHz in real-time. Up to 16000 frequency points are measured in parallel.

Spectrum Analyzer

Also in spectrum analyzer mode the TDEMI® X is equipped with a traditional superhet mode. It is implemented digital and provides 145 IF bandwidths beginning from 1 Hz going up to 30 MHz in 1, 2, 3, 5 steps as well as small sized steps in between.

By the innovative multi-channel technology the measurement speed is increased by a factor up to 64000. It corresponds to a Shortterm-FFT based set of 64000 full digital superheterodyne receivers. In conjunction with the parallel implementation of video filters and detectors all measurements according to standards are sped up by the factor 64000 and the user is enabled to analyse non-stationary phenomena much more precisely and reliably.

Due to the available 6 dB bandwidths and the full compliance to CISPR 16-1-1, in particular e.g. the very essential requirement regarding the dynamic range for pulses, the TDEMI® X can be applied for pre- and final measurements with peak and average detector. Also it is in full conformance with ANSI C63.2, MIL-461 and DO-160. A large number of additional functionalities allow the use in a wide range of applications for the analysis of analog and digital communication signals.
Real-time Spectrum Analyzer

The real-time spectrum analyzer mode comes along with a real-time bandwidth of 162.5 MHz in the standard configuration of the TDEMI® X instruments and can be extended even to 325 MHz real-time bandwidth by the option QCDS-UG which is absolutely unique in the test and instrumentation market.

The real-time spectrum analyzer mode provides all bandwidths and settings already known from spectrum analyzer mode and also provides the full dynamic for pulses required by CISPR 16-1-1.

This operation mode of the TDEMI® X series combines all advantages of conventional superhet analyzers with the advanced evaluation capabilities and vast advantages of the real-time capabilities based on the leading-edge technology provided by GAUSS INSTRUMENTS. The unrivaled real-time bandwidth of 325 MHz opens up absolutely new possibilities regarding the analysis, characterization and observation of all kinds of signals.

Time-domain Mode

The time-domain mode of the TDEMI® eXtreme provides a real-time bandwidth of 1 GHz and enables a broadband acquisition of signals with highest resolution in its class at the same time. Digitally implemented hardware triggering combined with an extremely high dynamic range allow triggering on CISPR 16-1-1 pulses and display with a unique precision of 16 bit.

By the easy and intuitive user interface and control via touchscreen, the operator can set and vary trigger levels for example directly with a touch on the screen of the instrument.

**Frequency Range**

- TDEMI® X1
  - 9 kHz - 1 GHz
- TDEMI® X3
  - 9 kHz - 3 GHz
- TDEMI® X6
  - 9 kHz - 6 GHz
- TDEMI® X18
  - 9 kHz - 18 GHz
- TDEMI® X26
  - 9 kHz - 26.5 GHz
- TDEMI® X40
  - 9 kHz - 40 GHz
- extendable down to 10 Hz - 9 kHz, with Option MIL/DO-UG
- down to DC, 2-Channel, with Option OSC-UG

**Reference Oscillator (OCXO)**

- Aging < +/- 3.5 ppm / 15 years
- Temperature drift (0 – 60° C) < +/- 1 x 10e-8
  - (12.8 MHz) 10 Hz -120 dBc/Hz
  - 100 Hz -140 dBc/Hz
  - 1 kHz -145 dBc/Hz

**SSB phase noise (1 Hz BW):**

- 1 Hz -95 dBc/Hz (12.8 MHz)
- 10 Hz -120 dBc/Hz
- 100 Hz -140 dBc/Hz
- 1 kHz -145 dBc/Hz

**Receiver Mode**

- Analog and Digital Superheterodyne Receiver
- STFFT-based Receiver Mode (Multichannel Mode)
- Trace Point > 8.000.000

**Receiver Mode (CISPR 16-1-1, ANSI C63.2)**

- IF Bandwidth 200 Hz
  - IF Filter: Gaussian Shaped Filter, Specification according to CISPR 16-1-1, Bandwidth Deviation < 10%
  - Peak, Average, CISPR-Average, Quasi-Peak, RMS, CISPR-RMS-AVG Detector (Option CRMS-UG)
  - Measurement at > 1400 Frequencies in parallel, >2400 Frequencies in parallel (with Option QCDSP-UG)
  - Frequency Step < 100 Hz

- IF Bandwidth 9 kHz
  - IF Filter: Gaussian Shaped Filter, Specification according to CISPR 16-1-1, Bandwidth Deviation < 10%
  - Peak, Average, CISPR-Average, Quasi-Peak, RMS, CISPR-RMS-AVG Detector (Option CRMS-UG)
  - Measurement at 8192 Frequencies in parallel, 16384 Frequencies in parallel (with Option QCDSP-UG)
  - Frequency Step < 400 Hz

- IF Bandwidth 120 kHz
  - IF Filter: Gaussian Shaped Filter, Specification according to CISPR 16-1-1, Bandwidth Deviation < 10%
  - Peak, Average, CISPR-Average, Quasi-Peak, RMS, CISPR-RMS-AVG Detector (Option CRMS-UG)
  - Measurement at 2048 Frequencies in parallel, 4096 Frequencies in parallel (with Option QCDSP-UG)
  - Frequency Step < 400 Hz

- IF Bandwidth 1 MHz
  - IF Filter: Gaussian Shaped Filter, Specification according to CISPR 16-1-1, Bandwidth Deviation < 10%
  - Peak, Average, CISPR-Average, RMS, CISPR-RMS-AVG Detector (Option CRMS-UG)
  - Measurement at 256 Frequencies in parallel, 512 Frequencies in parallel (with Option QCDSP-UG)
  - Frequency Step < 800 Hz

### Dynamic, Nonlinearities

- Preamp active, Preselection active/inactive, Attenuator: 0 dB
- Image Frequency Rejection: typ. 70 dBc (100dBc Multisampling)
- IF Rejection: 70 dBc, (100dBc Multisampling)
- Display Level Range: Noise floor – 120 dBµV (13dBm)
- split into 2 Measurement Ranges
- Automatic Switching between Measurement Ranges
- 1) Noise floor – 90 dBµV
- 2) 90 dBµV – 120 dBµV (f < 1 GHz)
- P1dB@1 GHz: > 120 dBµV, P1dB Mixer 5 dBm
- IP3: > 142 dBµV (typ. 155 dBµV)

### Display Accuracy

- Measurement Uncertainty: < 0.5 dB (100 MHz) typ. 0.15 dB
- Resolution: 0.01 dB
- f < 1 GHz: +/- 1 dB
- 30 GHz > f > 1 GHz: +/- 1.5 dB
- 40 GHz > f > 30 GHz: +/- 2 dB
- Pulse Indication according to CISPR 16-1-1

### Measurement time

- 1 µs – 60 s (Average, RMS)
- 1 µs – Infinite (Peak, Quasi-Peak, CISPR-Average, CISPR-RMS-Average)

### Maximum input level (RF1)

- 0 dB Attenuator: 122 dBµV
- 6V Pulses
- 10 dB Attenuator: 132 dBµV
- 18V Pulses

### Maximum input level (RF2)

- 0 dB Attenuator: 132 dBµV
- 18V Pulses

### Marker and Evaluation (Receiver Mode)

- Marker Functions: Marker, Delta, Peak Left, Peak Right, Left, Right, Marker
- to Trace, ...
- Save and Load Measurements
- Report Generator (Option RG-UG) for automated Evaluation against Limit Lines, incl. Subranges

### Demodulation (Receiver Mode) (Option DM-UG)

- Amplitude Modulation (AM)
- Frequency Modulation (FM)
- “Tune to Marker” Function
**Analog-Digital-Converter System**
- Number of bit per A/D Converter: 12
- Sampling rate: 2.6 GS/s
- Number of Analog-Digital-Converter (multiresolution): 2
- Full number of bit (real-time bandwidth 162.5 MHz): 22
- P1dB (ADC1) typ.: 13 dBm (without preamp)
- P1dB (ADC2) typ.: 40 dBm (pulses)

**EMI Receiver FFT-based Measuring Instrument**
- Frequency segment processed in parallel 162.5 MHz

**Scanning Speed (Receiver Mode typ.)**
- Band A, Quasi-Peak, dwell time 1 s: 3 s
- Band A, Quasi-Peak, dwell time 1 s: 1.5 s (QCDSP-UG)
- Band B (150 kHz – 30 MHz) 9 kHz peak detector, dwell time 100 ms: 0.1 s
- Band B, Quasi-Peak, dwell time 1 s: 3 s
- Band B, Quasi-Peak, dwell time 1 s: 1.5 s (QCDSP-UG)
- Band C/D (30 MHz – 1 GHz) 120 kHz, peak detector, dwell time 10 ms: < 1 s
- Band C/D (30 MHz – 1 GHz) 9 kHz, peak detector, dwell time 10 ms: < 2 s
- Band C/D Quasi-Peak, dwell time 1 s: 20 s
- Band C/D Quasi-Peak, dwell time 1 s: 10 s (QCDSP-UG)
- Band E (1 GHz – 6 GHz), dwell time 100 ms: 4 s
- Band E (1 GHz – 6 GHz), dwell time 100 ms: 2 s (QCDSP-UG)

**Weighted real-time Spectrogram (Receiver Mode)**
- Real-time bandwidth 162.5 MHz
- Peak, Quasi-Peak, Average, CISPR-Average, and RMS detector
- Time-domain fully gapless
- Frequency Step: Half of Bandwidth
- Minimum resolution in time 5 ms (depending on number of points)
- Zoom & Pan to Select Frequency band of interest

**Time-domain Analysis (RF) - Oscilloscope**
- Bandwidth 1 GHz
- Sampling rate 2.6 GS/s
- 16 Bit resolution
- 32000 Samples
- Trigger, Post- and Pre-Trigger function, Amplitude Trigger

**Tracking generator (Option MG-UG)**
- MG-UG1G: 9 kHz – 1 GHz
- MG-UG3G: 9 kHz – 3 GHz
- MG-UG6G: 9 kHz – 6 GHz
- MG-UG20G: 9 kHz – 20 GHz
- MG-UG40G: 9 kHz – 40 GHz
- MG-UG XE: Control of external signal generator
- Synchronous and fast swept
- Normalization via Transducer Factor

**Remote control / Interfaces**
- Ethernet/LAN (1 GBit and 100 MBit)
- Remote Control Command Set according to SCPI Standard
- USB 2.0, RS232, PS/2, Audio out for AM/FM Demodulation, VGA, HDMI
- GPIB (with Option GPIB-UG)

**Display / User Interface**
- Resolution 800 x 600 Pixel, 8.4”, True Color (16,78 m. colors)
- Touchscreen

**Power Supply**
- 230 V +/-20% 50 Hz, 110 V +/-10% 60 Hz
- Power consumption (typ.): 120 W to 150 W

**Temperature range / EMC**
- 15° – 40° C
- Emissions according to DIN EN 55011
- Immunity according to DIN EN 61000-6-2 (10V/m)
- Inputs matched
- Mains harmonics according to EN61000-3-2

**Mechanical stress**
- Sinusoidal vibration: 5 Hz to 150 Hz, max. 1.8 g. 0.5 g from 55 Hz to 150 Hz, in line with EN 60068-2-6
- Random vibration: 10 Hz to 100 Hz, acceleration 1g (RMS)
- Shock: 40 g shock spectrum, in line with MIL-PRF-28800F, class 3

**Weight (ca.)**
- TDEMI® X1: 15 kg
- TDEMI® X3: 18 kg
- TDEMI® X6: 18 kg
- TDEMI® X18: 20 kg
- TDEMI® X26: 20 kg
- TDEMI® X40: 25 kg

Upgradeable to Full Compliance
Established in the year 2007, the company GAUSS INSTRUMENTS is a manufacturer of highest performance EMC test equipment and provides advanced EMI test solutions pushing your product development and testing capabilities ahead, and speeding up your time to market cycles. With GAUSS putting the turbo in EMC since 2007, product certifications as well as pre-certification tasks have become as simple as they had never been before. Across all over the world we provide our unrivaled products, advanced test solutions, and services – together with a local service partner of our worldwide network of highly qualified and dedicated team and partners.

GAUSS INSTRUMENTS traces its technical roots to basic research on short time Fourier analysis and synthesis begun in the 70’s. In the early 2000’s the founders of GAUSS INSTRUMENTS invented a measurement technology combining time-domain and FFT based techniques and superheterodyne technology in a massively parallel topology - the so called TDEMI® Technology which has become the new state-of-the-art in the world of EMI testing in the meanwhile. TDEMI® Technology is a registered brand and patented technology of GAUSS INSTRUMENTS. It is provided to you only by GAUSS or its’ official certified local partners. Joint research projects were performed in the field of time-domain measurements of electromagnetic interferences (EMI) together with well-respected research institutes and universities. Official metrology labs, testing and certification institutes, as well as leading automotive OEMs and many other blue chip companies selected GAUSS as innovative cooperation partner and reliable solution provider for their demanding test requirements during market certification as well as product development but also research investigations. Over the past two decades about 100 publications, transaction papers, white papers and journal articles were published on selected topics of time-domain EMI measurements and EMC testing as well as intelligent methods for automated testing during market certification as well as product development but also research investigations.

And our innovation continues - combining our deep knowledge of real-time digital signal processing, millimeter, and microwave technologies to develop receiver and analyzer solutions combining and blurring the lines between previously discrete test instruments while delivering speeds and analysis capabilities several orders of magnitude greater than any other measurement equipment available. Combining both the advantages of the ‘old’ analog and the ‘new’ digital world we keep your testing up-to-date and beyond - pushing it to the next level and ready prepared for the future coming.

Today GAUSS offers a wide range of solutions from DC to 40 GHz for all kind of test requirements in the world of emission testing - full compliance solutions as well as pre-certification solution or even customized solution perfectly fitting to your specific requirements pushing your testing capabilities ahead. We provide customized signal processing solutions based on our well-proven hardware and DSP platforms, as well as unique software solutions. With a strong knowledge in real-time and digital technology, millimeterwave and microwave technology we develop systems that are absolutely outstanding in the field of test and measurement. E. g. the fastest real-time FFT based measuring instruments on the planet with a full compliance real-time analysis bandwidth of 645 MHz as well as classical superheterodyne technology to name a few only of our outstanding and outperforming features for full compliance testing and signal analysis.

It is our true passion to develop and to produce highest quality and highest performance instruments made in Germany. With leading-edge technology we’re fulfilling all the today’s requirements of complex measurement tasks and beyond. Our dedicated goal and ultimate passion is to provide our customers with all the additional benefits and full competitive advantages of accelerated testing, the optimum measurement procedures, unrivaled measurement speed and accuracy - all together at the same time. Empowered by our leading test solutions and patented TDEMI® Technology, we’re boosting the capabilities of today’s product development and significantly speeding up the time to market of your products. Thus, your product certification as well as pre-certification challenges become just a walk-over now!

Feel the experience and make your life easy!

Driven by our ultimate mission: Smarter testing for a smarter world.
