

Model 8000

Modular Controller

Key Features

- Comprehensive laser diode protection features
- Advanced 16-bit control technology
- Complete laser diode characterization (I_L , V_L) using 8500 modules
- Complete TE cooler characterization (I_{TE} , V_{TE}) using 8350 module
- Intuitive front panel controls
- Large graphics display, allowing full four channel visibility
- Standard GPIB/IEEE-488.2 and RS-232C interface
- LabVIEW drivers provided
- Four fully isolated module bays accept a variety of modules: 1) temperature controllers, 2) laser diode drivers, 3) combination LDD/TEC's

The **Model 8000 Modular Controller** is a result of Newport's continuing commitment to provide advanced laser diode instrumentation at affordable prices.

The improved version includes a sophisticated microprocessor providing enhanced system control and data collection capabilities.

Four fully isolated bays accept a wide variety of modules. Many new laser diode applications, requiring multiple current sources and temperature controllers, are accommodated:

- Multiple beam, individually addressed laser diodes
- Multiple laser diode pumped fiber amplifiers
- 2-D vertical cavity surface emitting laser diode arrays.

The Model 8000 mainframe automatically detects which module is located in each bay and displays the entire system configuration on the large LCD display. All you do is follow on-screen instructions to configure and operate the modular system.

Advanced 16-bit technology coupled with careful designs that isolate digital and analog signals ensure precision control and measurement capabilities. GPIB/IEEE-488.2 and RS-232C interfaces are included with the Model 8000 mainframe for complete remote control and data collection. LabVIEW drivers are supplied with every Model 8000 Modular Controller.

The Model 8000 Modular Controller is a cost effective solution that meets your laboratory, production, and quality control applications. A flexible system design guarantees that the Model 8000 accommodate future modules making this controller the most complete instrument for laser diode control, characterization, and testing far into the future.

Model 8350 Temperature Controller Module

Model 8325D Dual Temperature Controller Module

Model 8560 Laser Diode Driver Module

Controller Modules

Temperature Controllers

A 40 Watt Temperature Controller Module, the **Model 8350**, is offered for the Model 8000 to meet your most demanding TE cooling needs. Complete characterization of I_{TE} , V_{TE} and the sensor input is possible, making the 8350 module ideal for complete characterization of telecom laser diodes.

A dual output temperature controller, the **Model 8325D**, is also offered. It has two independent 15 Watt outputs that provide the same stability as the Model 8350.

Temperature controllers may be operated in one of three modes:

- constant temperature,
- constant resistance (thermistor and RTD), LM335 Voltage, or AD592 current,
- constant TE Current (8350 only).

Short-term stability is better than 0.0005°C while long-term stability is better than 0.001°C .

Four sensor types are available:

- thermistors,
- AD590 Series (8350 only),
- LM335 Series (8350 only),
- 100 Ω Platinum RTD's (8350 only).

IC sensors inherently display temperature while thermistors and RTD's display $^{\circ}\text{C}$ by entering a set of constants. Each sensor can be calibrated to increase its accuracy.

A temperature controller can be linked to a LDD module so that if the laser diode temperature exceeds a user-defined operating range, the output of the LDD turns off and an error message is displayed. Both T_{HI} and T_{LO} are set when configuring the TEC module.

Newport's temperature controllers have unparalleled long-term stability of better than 0.001°C

An independent I_{TE} current limit protects the thermoelectric module from being damaged by current levels that exceed its maximum rating.

Laser Diode Driver Modules

Advanced circuit designs and careful layout of the **8500 Series** modules result in an extremely low noise, highly stable output current source. This coupled with a low bandwidth mode results in the lowest noise output of any modular laser diode system.

An external analog modulation input allows precision control of the laser output for a variety of applications. Modulation is available in both constant current (ACC) mode and in constant power (APC) mode.

A monitor photodiode may be zero biased for CW low noise applications or reversed biased up to 5 volts for high frequency modulation.

All laser diode parameters are accessible with 16-bit resolution including the laser diode's forward voltage. Full characterization of laser diode parameters is available with every current source module offered with the Model 8000 mainframe.

Model 8605 combination Laser Diode Drive/TEC Module

GPIB/IEEE-488.2 interface gives you the power to remotely control and collect data

A GPIB/IEEE-488.2 interface is included in the Model 8000 with all control and measurement functions accessible. The command set is the most comprehensive of any controller available and emulates GPIB commands of other manufacturers.

Model 8000 master screen presents entire system configuration and status.

Limiting circuitry unconditionally prevents laser diode current from exceeding limit setting independent of operating mode even during external analog modulation.

Combination LDD/TEC Modules

When temperature stabilization is required, the **8600 Series Combination LDD/TEC** modules give you full control of your laser diodes. A 15 Watt (2.5A/6V) TEC section is combined with a quiet current source for complete stabilization of your laser diode.

A single 8600 module is capable of providing the necessary control for wavelength tuning laser diodes. The TEC section is used for coarse tuning while the LDD section is used for fine tuning. The Model 8000 is capable of precision wavelength tuning due to the fine resolution capability resulting from 16-bit control technology.

Combo LDD/TEC modules are designed for use in communication applications and have an internal function generator for testing systems. The user only needs to program the frequency, $I_{\max}$, and $I_{\min}$ to modulate the laser diode output. Both sine wave or square wave (50% duty cycle) waveforms are available from 200 Hz–300 kHz. This range of frequencies meets today's low frequency single tone and high data rate test requirements for datacom and telecom.

So whether you are wavelength tuning your laser diode or require full characterization capabilities, the 8600 Series combination LDD/TEC modules provide complete control of your laser diode.

Comprehensive Safety Features Protect Your Laser Diode Investments

Time tested safety features are incorporated into the Model 8000 mainframe and each laser diode driver module to provide maximum protection to your laser diode. Input power module filters provide first stage protection against AC line transients. Secondary filtering and power regulation stages coupled with high speed transient detection circuits, plus a proprietary intermittent contact protection circuit are added resulting in the most sophisticated laser diode instrumentation available today. All this coupled with a slow turn-on sequence, multiple output shorting circuits, and an independent current limiting feature provide the superior protection you demand from all your laser diode instrumentation.

Intuitive Controls and Large Graphics Display Simplify Control and Test Procedures

Improved data presentation and system control are achieved using a large graphics display. The MASTER screen presents the entire system configuration as well as each module's status. "Soft Keys" guide you through initial system setup routines and operation of each module.

Real-time control of an output is accomplished either by entering a set point on the keypad or via the digitally-encoded control knob. "Soft Keys" access saves system configurations and repetitive procedures. User-defined mini-programs and control functions are entered using the FUNC key giving you maximum flexibility when using the Model 8000.

All controls are clearly marked and instructions easily defined. The Model 8000 Modular Controller lets you work with laser diodes easier and faster than any other controller on the market today.

Temperature Controller (TEC) Module Specifications

	8350 TEC Module	8325D Dual TEC Module ⁽¹⁾
TEC Output

"-SO" Combo modules indicate the Sync Out version, enabling synchronized modulation among modules.

"-5V" Combo modules are provided with a permanent 5 VDC bias applied across the monitor photodiode pins. Note that this is not user adjustable.

Mainframe Specifications

Display Type	LCD graphics display, 128 H x 240 W pixels
Display Backlighting	Green LED
Display Controls	Brightness, contrast (contrast optimizes viewing angle) and invert screen
Laser Diode On Indicator	Green LASER ACTIVE LED indicates at least one laser diode is on
Output Connectors TEC	15-pin female D-sub
Output Connectors Dual TEC	Two 9-pin female D-sub
Output Connectors LDD	9-pin female D-sub, BNC (external modulation), BNC (auxiliary photodiode input)
Output Connectors Dual LDD	Two 9-pin female D-sub
Output Connectors Combo LDD/TEC	9-pin female D-sub (LDD), and 15-pin female D-sub (TEC)
Chassis Ground	4 mm banana jack
GPIB	24-pin IEEE-488
RS-232C	9-pin male D-sub
Power Requirements	90–132 V (max. 5 A), 198–250 V (max. 2.5 A), 50–60 Hz
Size (H x W x D) [in. (mm)]	5.25 (133) x 16.75 (426) x 14 (356)
Mainframe Weight [lb (kg)]	31.5 (14.3)
Module Weight [lb (kg)]	2.5 (1.1)
Operating Temperature	0°C to 40°C (<70% relative humidity non-condensing)
Storage Temperature	-20°C to + 60°C (<90% relative humidity non-condensing)
Laser Safety Features	Laser enable keyswitch, interlock, output delay (meets CDRH US21 CFR 1040.10)
Isolation/Crosstalk	All modules electrically isolated with respect to each other and from earth ground

8630-SO	LDD (3000 mA) & TEC (2.5A/6V) Combination Module, with Sync Out	46
8605-5V	LDD (500 mA) & TEC (2.5A/6V) Combination Module, with 5V PD Bias	47
8610-5V	LDD (1000 mA) & TEC (2.5A/6V) Combination Module, with 5V PD Bias	48
8630-5V	LDD (3000 mA) & TEC (2.5A/6V) Combination Module, with 5V PD Bias	49
Accessories		
300-02 ⁽²⁾	Temperature Controller Cable	
300-04 ⁽²⁾	TEC/Mount Cable	
300-16	10.0 k Ω Thermistor ($\pm 0.2^{\circ}\text{C}$)	
300-22	AD592CN IC Sensor (-45°C to $+125^{\circ}\text{C}$ Range)	
500-02 ⁽²⁾	Laser Diode Driver Cable	
500-04 ⁽²⁾	LDD/Mount Cable	
8000-RACK	Rack Mount Kit	

- 1) Blank plates provided with mainframe controller to cover unused bays.
 2) Please see page 64 for cable diagrams.

Model 8000 LDD, TEC, and combination LDD/TEC Modules are compatible with Newport's line of Temperature Controlled and Telecom Laser Diode Mounts, see page 52.

Ordering Instructions

There are two simple ways to order Newport's Model 8000 Modular Controller:

I. When ordering your customized system configuration, specify the following Model number:

8000-OPT- - - -
 Bay 1 Bay 2 Bay 3 Bay 4

Indicate the Option Code number for the specific Module you would like us to install in any one of the four available bays. Please indicate NN, if you do not require a module in a particular bay.

Example: 8000-OPT-11-01-41-NN

Model 8000 Modular Controller with Model 8505, 500 mA LDD Module, in Bay 1; Model 8350, 5A TEC Module in Bay 2; Model 8605, 500 mA/2.5A Combination LDD/TEC Module in Bay 3; and no Module in Bay 4.

II. Any one of Newport's Model 8000 Modules can be ordered separately, in the event that you would like to upgrade your Modular Controller in the future. Please use only the Model number as shown in the table above, for ordering stand alone modules.

For the modular system that best meets your laser diode control needs, call Newport's Application Sales Engineers.

Model 708 8-Channel Butterfly Telecom LD Mount is ideal for use with the Model 8000. Please see page 55 for more information.

YOUR SINGLE SOURCE TEST & MEASUREMENT SOLUTION

NEW & USED TEST EQUIPMENT

- Rent Equipment
- Sell Equipment
- Lease Equipment
- Trade-In Equipment

Spectrum analyzers • Mobile phone testers • Oscilloscopes
Network analyzers • Service monitors • OTDR
• Multimeters - at great savings!

Test Equipment Connection Corporation is your single source test & measurement solution. We offer over 400 test equipment manufacturers including Agilent, Tektronix, Anritsu, Rohde & Schwarz, Advantest, Megger, LeCroy, Chroma and Fluke, plus thousands of New, Used, Second Hand, Pre-Owned, Demo, Refurbished, and Reconditioned test equipment products.

For over 18 years, we have been providing high quality spectrum analyzers, mobile phone testers, oscilloscopes, network analyzers, service monitors, RF amplifiers, broadband amplifiers, signal generators, OTDR, fusion splicers, and digital multimeters at great savings to over 200,000 customers worldwide. Lease or rent from us, and we can help manage your idle assets using our consignment program. Trade in underutilized test equipment for cash or credit towards the test solutions you need today! TEC offers repair and calibration support for thousands of current and discontinued brands. TEC's GSA Contract #GS-07F-0358U provides lower cost test and measurement equipment to qualifying government contractors and agencies.
