

Advanced Test Equipment Rentals - www.atecorp.com 800-404-ATEC (2832)

...our most versatile instrument

- Programmable (Ethernet/USB/RS-232/GPIB)
- Independent clock rates for each channel
- 250pS Delay & Width Resolution

The Model 575 Digital Delay / Pulse Generator represents the latest in timing capabilities. With up to 8 outputs configurations as varied as the applications the product serves, the Model 575 is clearly our most versatile instrument. We have combined advanced features such as a Labview/USB interface, complex burst sequences, Divide-by-N, Setting Profiles, Dual Triggers, Clock Divider, Pulse Picking and Negative Delay with core technology in precision timing. Our 250pS Delay & Width resolution, and 50pS internal jitter, allow users great confidence in setting up an experiment or synchronizing multiple events.

New Features:

Illuminated Channel Enable Buttons

Each channel has a designated enable/disable button. When individual channels are active or enabled the buttons are illuminated. This allows for easy reference and avoids any confusion of output operability. The run/stop indicator on the front panel LCD display as well as an illuminated run/stop button further simplify setup.

Selectable Clock Reference

The Model 575 offers additional inputs and outputs for external clock syncing. Specify your input / output reference frequency (10MHz to 100MHz). Sync with the Mode Lock Oscillator of a laser, or phase lock multiple units with one clock.

Flexible Gating Options

The Model 575 is packed with gating options for almost any setup. You may gate with a channel or on any input. Repeat individual channels or gate all. Gate immediately (output inhibit) or gate after a pulse (pulse inhibit).

Flexible Gating Options

The Model 575 is packed with gating options for almost any setup. You may gate with a channel or on any input. You may gate individual channels or gate all. Gate immediately (output inhibit) or gate after a pulse (pulse inhibit).

Individual Rates

Each channel can have individual channel rates (either To or any of the other channels..). This is similar to having a separate clock for each output.

Auto-Save

Forgot to save your settings? The Model 575 stores your setup configurations while powering down. Recall is automatic on power-up.

Dual Input Panel Connectors

The Model 575 offers two inputs for triggering or gating. User may specify electrical or optical input signals, and configure any trigger/gate combination. Use Trigger #2 to disable a triggered pulse train.

Chi 5.00 V Chi 5.00 V M4.00µ5 A Chi 2 2.50 V V 10.00 S

Front Panel Optical

Many applications benefit from optical signals. For noisy environments, or communications applications, we offer an LED output stage at the front panel. This modular option can be configured for 2, 4, 6 or 8 outputs at 820nm or 1300nm

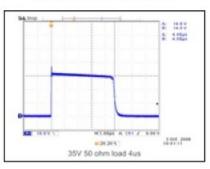

Front Panel High Voltage

Our modular architecture allows us to offer expanded functionality on user-selected front panel outputs. We offer a front panel High Voltage option (adjustable from 5v to 35V, 200 mV steps) on 2, 4, 6 or all 8 channels.

Combined Output Types

The outputs are configured in modules and output types are combined in pairs. Thus one may select optical, standard electrical or high voltage electrical in pairs for their instrument. For example, a 8 channel unit may have optical, standard electrical and high voltage outputs all on one instrument. Custom or additional output modules may be added as the need arises.

35v 50 ohm load 4us

Field Programmability:

Field Programmability

The instrument can now have functions upgraded in the field, such as a special or custom feature upgrade via a fully programmable FPGA.

Pulse Picking

Using an external modulation up to 100MHz, you may select 1 out of every X pulses for a given channel.

Customer Output Modes

Custom Modules such as the TZ-50 give users an expanded list of capabilities with the Model 575. One example is our TZ-50 option, which allows customers a TTL signal into 50 ohms.

Negative Delay

Use the handy negative delay feature to reference one channel with respect to another channel in positive or negative time increments. By allowing a channel to reference another channel as its trigger, you can synchronize the channels with respect to each other.

DELAYS		
Range	0-1000 s	
Resolution	250 ps	
Timebase	25 ppm	
	(1 ppm optional)	
RMS Jitter	50 ps	
Pulse Inhibit Delay	120 ns	
Output Inhibit Delay	50 ns	
SYSTEM EXTERNAL TRIGGER INPUT(S)		
Number	2 1	
Rate	DC to 1/(200ns + longest delay);	
	maximum of 5MHz
