General Dynamics is pleased to announce the second generation of its revolutionary R8000 communications system analyzer. The R8000B delivers a previously unimaginable result: a truly portable instrument with more functions than yesterday’s bench top analyzers. And it now offers significantly improved spectral purity, surpassing that of comparably priced and even much more expensive radio test sets.

The R8000’s 14 pound weight gives technicians power and flexibility never before attainable - or currently attainable with any other instrument. This, combined with the unit’s feature-packed spectrum analyzer and bright 8.4” color LCD, makes it ideal for taking to sites for infrastructure maintenance and interference measurement.

Firmware upgrades are available free via web download for the life of the unit, and new capabilities are being constantly added - so your R8000B actually becomes more powerful over time! Software and protocol options can also be added directly from the front panel in less than 30 seconds; so it is clear that the R8000B is the most flexible, robust future-proofed radio test set the industry has ever seen. The R8000B will change the way you perform radio service forever.
A Compact and Lightweight Solution
You no longer need to lug multiple pieces of heavy equipment to perform service at remote locations. The R8000 has everything you need in one compact, 14 lb. package! Among the instruments included in the R8000 are:

- Spectrum Analyzer
- Signal Generator
- Sensitive Measurement Receiver
- Tracking Generator (optional)
- SINAD Meter
- Distortion Meter
- Modulation Scope
- Oscilloscope
- Frequency Error Meter
- Cable Fault Locator (optional)
- FM Deviation Meter
- AM Modulation Meter
- Receive Signal Strength Meter
- Broadband and Narrowband Power Meters
- Audio Counter
- Audio Generator
- AC / DC Voltmeters
- Return Loss/VSWR bridge (optional)
- DMR (MOTOTRBO™) test mode (optional)
- NXDN test mode (optional)
- TETRA subscriber test mode (optional)
- P25 conventional test mode (optional)
- P25 trunking test mode (optional)

Superior Spectrum Analyzer
The R8000 comes equipped with a spectrum analyzer comparable to those found on stand-alone instruments costing as much or more. With a noise floor well below -140 dBm at narrow spans, super-fast signal acquisition, 4 markers (2 standard), and an available variable vertical scale down to 1 dB per division, the R8000 is the ideal tool for tracking and measuring elusive interfering signals.

Upgradable and Expandable
The software-based architecture of the R8000 lets you add software options and upgrades in the field. So if your needs change down the line, simply order the feature or protocol you need and enable it by entering a 16 digit option key using the front panel keypad.

Firmware upgrades are available on our website free of charge for the life of the unit.
Monitor & Control Interface (M&C), Low Phase Noise Performance & 8920B Emulation for Manufacturing Environment

The M&C consists of proprietary commands as well as support of IEEE standard equipment ID query for automating manufacturing test processes and procedures. This, along with the exceptional phase noise performance of the R8000B’s signal generator significantly improves manufacturing efficiency by reducing capital costs for the manufacturing applications. Additionally, the R8000B’s 8920 emulation package provides a drop-in replacement for obsolete HP 8920B service monitors. The outstanding purity of the R8000 signal generator can be seen in the spectrum analyzer capture on the right.

“Dual Display” lets you see carrier signal and demodulated audio simultaneously

Our unique Dual Display allows you to view the RF spectrum analyzer and modulation scope at the same time, giving you the ability to analyze RF characteristics of the carrier signal and recovered audio from the same screen. Complete functionality of each instrument is available in Dual Display mode, and all associated measurements are displayed. With Dual Display, you no longer need to go back and forth from the spectrum analyzer to the modulation scope to see everything you need – it’s all on one screen! Included with the Enhanced Spectrum Analyzer option R8-ESA.

Tracking Generator option

Our Tracking Generator option provides an integrated instrument that sets up the RF Generator in a sweeping mode that is lock stepped with the Spectrum Analyzer. This delivers a valuable capability for measuring and servicing a wide variety of RF filtering and combining networks such as IF filters, Duplexers, etc. A low Spectrum Analyzer noise floor, FFT processing, and a broad selection of customizable display and marker functions assure quick and accurate measurements. Additionally, antenna return loss and VSWR measurements are now possible with the use of the optional Return Loss Bridge (R8-VSWR).
Comprehensive P25 test capability in a truly portable unit!

The R8000 is the only portable communications analyzer with a comprehensive suite of APCO P25 diagnostics. The R8000's P25 test functions are fully compliant with the TIA/EIA-102.CAAA measurement standard and include:

- Bit Error Rate (BER) test patterns
- Symbol Deviation
- Modulation Fidelity
- Frequency Error
- Power
- Eye Diagrams

**BER testing**

All 10 TIA specified test patterns for P25 radio receivers and all 7 TIA test patterns for radio transmitters are measured: 1011 Hz Tone, 0.153, Busy, Calibration, Silence, Idle, AFC, Symbol Rate (Rx only), Low Deviation (Rx only), and C4FM Modulation Fidelity (Rx only).

**P25 signal quality measurements**

Modulation Fidelity indicates how far a P25 signal is from ideal theoretical modulation. Symbol Deviation is a convenient signal quality metric. A P25 radio with a perfect C4FM modulated signal should measure 1800 Hz. Significant variation from 1800 Hz indicates a potential transmitter problem. Frequency Error displays the difference between a P25 transmission carrier and operator-selected monitor frequency.

**P25 Trunking**

The P25 trunking option enables the R8000 to become a base station emulator and trunking controller. Default Frequency plans for the VHF/UHF, 700 MHz and 800 MHz bands are provided. The user may modify these plans as needed for channel bandwidth, duplex offset and the bands base frequency offering a complete and comprehensive test solution for all P25 trunked systems. Test functions include: Control Channel Idle, Registration Request, Registration Grant, Traffic Channel Request/Grant, Voice Channel audio paths, including encryption if fitted, with Voice Loopback, Incoming call alert tone, and Voice call (1011Hz Tone).

**Patented Voice Loop**

The R8000's patented Voice Loop feature (U.S. patent 5703479) allows quick confirmation that P25 audio is being properly encoded and decoded by a subscriber unit. The user simply keys the radio and records up to 10 seconds of audio. When the radio is unkeyed, the R8000 automatically returns the recorded audio, which can then be heard over the radio’s speaker. Recordings can be replayed as many times as needed.
The TETRA option allows quick RF performance testing of TETRA radios with a Direct Mode Operation (DMO) channel. Modulation performance can be evaluated using Error Vector Magnitude (EVM) measurements and viewing a constellation display. Radio sensitivity can be tested using a Loopback BER feature or paging sensitivity.

Radios can be verified to operate on channel and within timing and power requirements with measurement of:

- Carrier Frequency Offset
- Power Profile
- Unwanted Power
- Modulation Spectrum

The R8000 communications analyzer is the world’s only portable full-featured radio test set with the ability to test TETRA, APCO P25, DMR, NXDN and analog radios across the entire RF spectrum from 250 kHz to 3 GHz!

1) Bright 8.4” Color LCD with wide viewing angles
2) User-Friendly, softkey driven operation
3) Tuning Knob for quick and easy changes of numeric entries: Digital precision with an analog feel
4) Off-the-air antenna port for sensitive receiver measurements
5) VGA, Ethernet, Key Loader, and additional USB ports
6) One-touch mode keys take you directly to the instrument you need
7) Escape Key returns user to previous screen for easy navigation
8) Hot Keys for quick navigation from screen to screen
Digital Narrowband: DMR and NXDN Test Options

The migration to 6.25 kHz channel equivalency is moving faster and faster. The R8000 gives you the capability of maintaining radios and radio infrastructure for both major digital narrowband technologies: DMR and NXDN.

The R8000 features a Test option that allows testing of radios compliant with the ETSI Digital Mobile Radio (DMR) standard. The unit measures Bit Error Rate (BER) for all DMR specified test patterns, as well as RF input power and frequency error in both digital and analog modes. The R8000 fully supports MOTOTRBO™ Professional Digital Two-Way Radio System (Motorola's DMR implementation) using test procedures specified by Motorola engineers.

The R8000 NXDN mode provides a suite of test functions fully compliant with the Conformance Test section of the NXDN Common Air Interface (CAI) standard. These include Symbol Deviation, Modulation Fidelity, BER, Frequency Error, and Power. This option also features the Voice Loopback feature used in the P25 option to provide audio verification of the radio's end-to-end operation.

The R8000 offers a radio service solution that was unimaginable just a few years ago: a multi-purpose communications analyzer with the performance of expensive stand-alone instruments, weighing just 14 pounds. It now adds to this powerful package the ability to test NXDN, DMR and P25 radios, making it the only sensible choice for today's radio service environment. And if your needs change tomorrow? No problem. The R8000's revolutionary, software-based architecture lets you can add protocols and other options in a matter of seconds!

ONLY General Dynamics possesses the technology, experience, and commitment to the two-way radio market required to develop such a transformational product. With unmatched power, portability and expandability, the R8000 is the future of radio communications test equipment - available today.

The R8000 from General Dynamics: Comprehensive, state-of-the-art digital narrowband test capability in a portable software-defined analyzer.
The R8000’s AutoTune option performs all recommended factory test and alignment procedures in a fraction of the time needed to perform them manually. Just select your radio model and connect as shown on the R8000, choose the tests and alignments you wish to perform, then enter your operator ID and press the “start button.”

**Benefits:**
- Test time reduced by over 80%
- Consistent manufacturer specified alignments among radios
- Accurate and repeatable test results
- Comprehensive test reports show before & after readings, time, date and operator identification
- Pass/Fail indicators flag radio defects
- Little or no technical expertise required
- Results are stored on the R8000 and can be exported to a USB drive for analysis with PC spreadsheet software

AutoTune™ Automated Radio Test and Alignment

The R8000 automatically reads key radio information such as model number and serial number, and makes the measurements and alignments needed to bring the radio within factory specifications. Within minutes you have a complete record of your test session stored on the R8000 in comma delimited form for quick and easy recall. Over time you will build a complete test history for every radio – ideal for large fleets with formal Preventative Maintenance programs. Test reports can be conveniently viewed on the R8000 or exported for further analysis using spreadsheets and other data manipulation programs.

AutoTune Test Status Screen

Reduces radio test and alignment time from an hour or more to 10 - 12 minutes!

Tests and Alignments Performed:

**Transmitter Tests**
- Bit Error Rate (BER)
- Reference Frequency
- RF Output Power

**Receiver Tests**
- Rated Audio
- Distortion
- SINAD Sensitivity
- Noise squelch
- Voice Modulation

AutoTune Test Report

R8000 AutoTune is now available for:
- Motorola XTL Series Mobiles
- Motorola XTS2500/5000 Portables
- Motorola APX Mobiles & Portables
**Specifications**

### OPERATING/DISPLAY MODES
- AM/FM Monitor
- AM/FM Generator
- AM Modulation Meter
- FM Deviation Meter
- Audio Synthesizer
- Duplex Generator
- Tracking Generator (Opt.)
- Dual Display (Opt.)
- Cable Fault Locator (Opt.)
- Spectrum Analyzer
- Frequency Counter
- Frequency Error Meter
- Digital Voltmeter
- Power Meter
- Oscilloscope
- Signal Strength Meter
- SINAD/Distortion Meter

### GENERAL
- Displayed Average Noise Level (DANL): -120 dBm (50 Ohm input termination)
- Dynamic Range: 80 dB
- Input Related Spurious: -60 dBc max
- Residual Spurious (non-input related): -70 dBm

#### POWER
- DC Power Requirements: 24 VDC @ 5.0 A max
- AC Adapter Spec: 100-240 VAC, 2.5 A; 50-60 Hz
- Battery Power: Optional External Battery
- Battery Operation: 1 hour minimum

#### MECHANICAL / ENVIRONMENTAL
- Dimensions: 9.4" (23.9 cm) H, 12.7" (32.3 cm) W, 7.5" (19.1 cm) D
- Weight: <14 lbs (6.4 kg)
- Operating Temperature: 0 º to 50 º C
- Storage Temperature: -30 º to +80 º C
- Humidity: 80% maximum relative humidity
- Altitude: Up to 10,000 ft (3048 m)

### WARRANTY
- Standard Warranty: One year
- Three Year Service Plan: Optional
- Five Year Service Plan: Optional

### GENERATOR (Receiver Test)
- Port Protection Limit: 5W for 30 seconds
- Frequency Range: 250 kHz to 1 GHz
- Extended Frequency Range (Optional): 250 kHz to 3 GHz
- Frequency Resolution: 1 Hz

#### OUTPUT LEVEL GENERATE PORT
- Range FM: +5 dBm to -95 dBm below 2 GHz
- Range AM: -1 dBm to -95 dBm above 2 GHz
- Resolution: 0.1 dB
- Accuracy: ±2 dB

#### OUTPUT LEVEL RF I/O PORT
- Range FM: -30 dBm to -130 dBm below 2 GHz
- Range AM: -40 dBm to -130 dBm above 2 GHz
- Resolution: 0.1 dB
- Accuracy: ±1 dB to 1 GHz; ±2 dB > 1 GHz

#### SPECTRAL PURITY
- Non-Harmonic Spurious: 20 dBc max
- Residual Spurious: 5 Hz, 300 Hz to 3 kHz
- Residual AM: 1.0% max, 300 Hz to 3 kHz
- SSB Phase Noise (20 kHz Offset): -93 dBc/Hz max all below 1 GHz (15° to 35° C)
- -93 dBc/Hz max all frequencies (0° to 50° C)

#### FM MODULATION
- Deviation Accuracy: 5% of setting
- Deviation Range: 0 to 75 kHz
- Deviation Resolution: 10 Hz
- Modulation Bandwidth: 5 Hz to 20 kHz

### RECEIVER (Transmitter Test) (Cont.)

#### AM MODULATION
- AM Depth Range: 0 to 90%
- Resolution: 1% of setting
- Modulation Bandwidth: 100 Hz to 10 kHz
- Accuracy: 5% of setting

#### MODULATION TYPES
- 1 kHz Tone, Private Line, Digital Private Line (w/ DPL Invert), Single Tone, DTMF, Two-Tone Paging, 5/6 Tone Paging, PDCSAG, External Inputs from both a supplied microphone and BNC input.

#### RECEIVER (Transmitter Test)

#### FREQUENCY ERROR MEASUREMENT
- Type of Display: Autoranging
- Resolution: 1 Hz

#### FM DEVIATION MEASUREMENT
- Demodulation Range: Up to ±75 kHz
- Accuracy: ±5% plus residual FM
- Frequency Response: Selectable per the following:
  - Low Pass Filters: 300 Hz, 3 kHz, 20 kHz
  - High Pass Filters: 1 Hz, 300 Hz, 3 kHz

#### AM MODULATION MEASUREMENTS
- Demodulation Range: 0 to 100%
- Accuracy: ±5% for levels below 80%
- Frequency Response: Selectable per the following:
  - Low Pass Filters: 100 Hz, 3 kHz, 20 kHz
  - High Pass Filters: 1 Hz, 300 Hz, 3 kHz

#### RECEIVE SIGNAL STRENGTH LEVEL METER
- Frequency Range: 250 kHz – 1 GHz (3 GHz optional)
- Accuracy: ±2 dB
- Sensitivity: -120 dBm

### RECEIVER (Transmitter Test)

#### FREQUENCY
- Accuracy: ±2 dB
- Resolution: 1 Hz

#### IF FILTERS
- 6.25 kHz, 12.5 kHz, 25 kHz, 50 kHz, 100 kHz, 200 kHz

#### POWER
- Maximum Power: 0 dBm
- Alarm: ±10 dBm

#### INPUT
- Alarm: Internal temperature alarm

#### RF I/O PORT
- Maximum Power: 150 W
- Alarm: Internal temperature alarm

#### ANTENNA PORT
- Maximum Power: 50 W for 5 minutes
- Alarm: 150 W for 30 seconds (30 sec. on, 5 min. off)

### OPERATING/DISPLAY MODES

### MEASUREMENTS

#### AM MODULATION
- Resolution: 1% of setting
- Modulation Bandwidth: 100 Hz to 10 kHz
- Accuracy: 5% of setting

#### MODULATION TYPES
- 1 kHz Tone, Private Line, Digital Private Line (w/ DPL Invert), Single Tone, DTMF, Two-Tone Paging, 5/6 Tone Paging, PDCSAG, External Inputs from both a supplied microphone and BNC input.

The R8000B PREMIER PACKAGES are the best values available in communications test equipment.

In addition to the original 3 GHz Premier Package, General Dynamics now offers a 1 GHz version. The 1 GHz Package offers the same value-packed option bundle as the 3 GHz Package, but substitutes a 3 year service plan for 3 GHz capability for customers whose test requirements don’t extend beyond 1 GHz.

Both packages include the following options standard:

- Tracking Generator – A must for tuning cavities, duplexer and filters
- Enhanced Spectrum Analyzer – Includes our proprietary DualScope display which shows the carrier signal and modulation scope simultaneously
- Remote Front Panel – Operates all functions of the unit from a networked PC
- Cable Fault Locator
- Soft Carrying Case

Whichever version of the Premier Package you chose, you will own the new industry standard in communications test equipment. No other product offers a remotely comparable combination of features, portability, expandability and cost-effectiveness. And because it’s a General Dynamics product, you know you can count on world-class reliability and after-sale support.

The World’s Most Future-Proofed Radio Test Set

With the R8000B, you have a test set that is not only state-of-the-art, but state-of-tomorrow’s-art. We continue to add capabilities with frequent firmware releases, all of which are downloadable from our web site free for the life of the unit.

And if you find yourself maintaining radios requiring a new type of protocol, or need an option you didn’t originally purchase, simply order the protocol or option you need, enter the installation key, and you will have your new feature instantly. Software options can also be added via the front panel in less than a minute – you don’t need to send the unit to a service facility and be without it for even a day.
