AMX Series

SINGLE AND THREE
PHASE AC POWER
SOURCES

500 VA
TO
12,000 VA

 **PACIFIC**
POWER SOURCE

A Thermo Voltek Company

TAKE CONTROL OF YOUR AC TEST POWER

The AMX Series is a family of High Performance Linear AC power sources covering the power range from 500 VA to 12 kVA. The product line offers both single and three phase models. Units are conservatively designed and output power ratings are based on the most severe combination of input line, output voltage, power factor, and temperature. This approach to product design allows the AMX Series to excel when delivering the high peak load currents demanded in the AC test environment. Great emphasis has been placed on low acoustic noise, ease of installation, and maximum power per cubic inch of rack space. Control and operating features provide a high degree of application versatility and ease of use for the test engineer. Applications range from simple, manually controlled frequency conversion to harmonic testing and sophisticated bus programmable transient simulation.

An exceptionally broad bandwidth (50 kHz small signal) combined with peak/RMS current of 4-6:1 give the AMX Series the ability to produce high quality, low distortion output power into the most dynamic loads.

Pacific Model 308AMX with UPC Controller

KEY FEATURES PROVIDE APPLICATION VERSATILITY

- IEEE-488.2 or RS-232C with SCPI compatibility
- LabVIEW for Windows®/LabWindows® drivers
- Waveform Creation by Harmonic Synthesis
- Graphical Analysis (Voltage and Current)
- Harmonic Analysis (Voltage and Current)
- Metering of RMS and Peak Values
- Continuous Self Calibration (CSC)
- Line Sync Option
- 6:1 Peak Current Capability
- Low Impedance for IEC555 Testing
- Programmable Output Impedance
- Up to 0-300 VAC Direct Coupled Out
- 1 Phase / 3 Phase Switch Selectable
- 20-5000 Hz Full Power Bandwidth
- Power Levels from 500 VA to 12 kVA
- Externally Referenced Meter Calibration
- CE and ETL Mark available

DESIGN PROVIDES TOTAL CONTROL OF AC POWER

- All AMX Series power source models may be equipped with either a digitally programmable Oscillator/Controller (UPC type) or a manually controlled Oscillator (UMC type).
- Single phase power source models may be controlled to operate on either a 0-135 VAC range or a 0-270 VAC range. Three phase models are additionally switchable to 3 ϕ /1 ϕ output power form.
- Total control of the output power form and the selection of either the direct output or the optional transformer output is available from the front panel or the bus.
- All operating functions may be controlled from either the front panel or from a remote RS-232 or IEEE 488.2/ SCPI BUS. LabVIEW for Windows® and LabWindows® Instrument Drivers are available.

SPECIAL AMX SERIES OPERATING FEATURES

CONTINUOUS SELF CALIBRATION

Provides for exceptional accuracy of the AC output Voltage. When enabled, accuracy improves to $\pm 0.03\%$ referenced to the power source internal voltmeter.

PROGRAMMABLE DYNAMIC OUTPUT IMPEDANCE (OPTIONAL)

Provides positive or negative output impedance. The output voltage waveform at the right is flattened as a result of a high peak load current drawn by an electronic load at the peak of the sine wave.

Engaging the dynamic output impedance (Z°) feature dynamically compensates, as shown at the right, for the distribution or transformer losses up to $\pm 10\%$ of the output voltage.

WAVEFORM LIBRARY

Up to 99 different waveforms may be stored in the waveform library for execution as part of a steady state test program or for substitution in any output phase as part of a transient test program. Memory location #1 is a non-editable high resolution sine wave. Locations 2-16 are editable and may be substituted in any output phase. Locations 19-99 are factory stored, non editable waveforms that may be copied to 2-16 for edit and execute.

WAVEFORM LIBRARY

Up to 99 different waveforms may be stored in the waveform library for execution as part of a steady state test program or for substitution in any output phase as part of a transient test program. Memory location #1 is a non-editable high resolution sine wave. Locations 2-16 are editable and may be substituted in any output phase. Locations 19-99 are factory stored, non editable waveforms that may be copied to 2-16 for edit and execute.

WAVEFORM EDIT

Provides the ability to modify a stored waveform by specifying the waveform amplitude desired at each specific phase angle. This method can be used to quickly create spikes, dropouts, notches and other sub-cycle wave conditions. The resulting modified waveform can be stored for execution.

WAVEFORM ANALYSIS (OPTIONAL)

Provides both a graphic and numeric display of the harmonic structure of a voltage or current waveform. The waveform is sampled at 512 samples per cycle using a 12 bit A/D converter. The resulting high fidelity waveform is analyzed for its harmonic structure up through the 51st harmonic. Data presented includes the magnitude of each harmonic in %, the total harmonic distortion, and the odd and even harmonic distortion in %.

WAVEFORM SYNTHESIS (OPTIONAL)

Provides the ability to quickly create virtually any AC Test Waveform that may be required by building it out of harmonics. The process is as simple as keying in the harmonic multiple, the amplitude, and the phase angle for each desired harmonic up through the 51st. If desired, waveforms may also be created in the time domain by making entries from the front panel or by downloading from a host PC.

TIME BASED TRANSIENTS

Provide the ability to create and execute on command, transients that occur linearly over a specified time segment to modify output voltage or frequency.

CYCLE BASED TRANSIENTS

Provide the ability to create and execute, on command, transients that substitute a selected waveform in the output for 1 to 100 cycles. The waveform being substituted can be selected and/or modified from the waveform library. Substitution is for an integer number of cycles, regardless of frequency.

FUNCTION KEY PROVIDES ACCESS TO SPECIAL FUNCTIONS

SETUP: PRESS 1 FOR PROGRAM SETUP
 2 FOR WAVEFORM SETUP
 3 FOR GENERAL SETUP
 4 FOR CALIBRATION MENU

PROGRAM SETUP

- Copy a program
- Delete a program
- Erase all memory, reset CPU

WAVEFORM SETUP

- Edit a waveform
- Copy a waveform
- Waveform synthesis

GENERAL SETUP

- UPC setup
- LCD setup
- UPC status
- Power source status
- Range control
- Slew rate setup

CALIBRATION MENU

- Execute externally referenced calibration
- View calibration constants

SPECIAL FUNCTIONS ACCESSED THROUGH UPC SETUP MENU

- **SENSE** Establishes either local or external sense for metering and CSC.
- **CSC** Continuous Self Calibration – provides for exceptional voltage accuracy.
- **PROGRAM Z°** Programmable output impedance dynamically compensates for output transformer or line distribution losses. Can simulate a soft power grid.
- **TRANSITION TIME** Permits control of the transition time when changing the output voltage and frequency.
- **FREQUENCY LIMITS** Sets min and max programmable frequency limits.
- **VOLTAGE LIMITS** Sets min and max programmable voltage limits.

TOTAL CONTROL, METERING, AND ANALYSIS OF AC POWER. SIMPLE INTUITIVE OPERATION.

INFORMATIVE 160 CHARACTER LCD DISPLAY

- Soft green backlight
- Adjustable

PARAMETER SELECT KEYS

Select phase voltages and operating frequency when manual control is desired. The selected parameter is indicated by the LCD display. The clear key erases entries and keeps erasing with repeated pressing until the basic VI screen is displayed.

EXECUTE KEY

Instantly executes a stored program that has been selected with the program key.

SLEW KEYS \triangle ∇

Smoothly change the designated voltage or frequency parameters. Rates are separately programmable.

TRANSIENT (TRANS) KEY

Turns time based or cycle based transients On or Off. Indicator is On when transient is executed.

OUTPUT ENABLE KEY

Turns the output contactor of the power source On or Off. Indicator is On when the contactor is closed.

ENTER KEY

Stores new parameter data that has been keyed in.

PROGRAM KEY

Selects 1 of 99 programs for edit or execution.

EDIT KEY

Selects the program edit mode and prompts for new entry.

STORE KEY

Stores a program upon completion of editing.

DISPLAY KEY

Sequences through each metering screen:

- VI Meter
- Power Meter
- AMPS Meter
- Waveform Analysis (option)

Notes:

1. All single phase units are operable with dual voltage ranges as listed. All three phase units are operable as single phase with dual voltage range capability or as three phase. Output voltage ranges and 1f / 3f conversions are selected by front panel or bus command.
2. Output voltage ranges listed are for standard units. VMAX is achievable with nominal input voltage at full load. Other voltage ranges are available with the output magnetics option.
3. Current ratings at 125 VRMS output.
4. Input power frequency is 47-63 Hz. Single Phase: 100, 110, 120, 200, 208, 220, 230, 240, VAC ± 10%. Three phase: 208, 220, 240, 380, 416 VAC ± 10%.

POWER SOURCE SPECIFICATIONS

Output Frequency: 20 to 5000 Hz. Full Power
 Line Regulation: 0.1% max for a 10% line change
 Load Regulation: 0.25% 20 to 2000 Hz.
 0.5% 2000 to 5000 Hz.
 Can be improved to less than 0.03% with CSC engaged.
 Output Distortion: 0.1% THD from 20 to 1000 Hz
 0.25% THD from 1000 to 5000 Hz
 Ripple and Noise: -72 dB
 Response Time: 5µsec. typical to a step load change. Small signal band-width is 5 Hz. to 50 kHz, typical.

MECHANICAL SPECIFICATIONS

All models are designed for operation in 19 inch equipment racks. Models above 1800 VA have side handles for ease of handling.
 Mounting: Standard 19 inch rack. Slide rails are available as an option for all models.
 Height: See model table above for panel height.
 Depth: Will not exceed 24 inches from the front panel to the rear of the chassis, including connectors, handles and cabling.
 Cooling: Forced air, front or side intakes, rear exhaust with auto fan speed control for low acoustic noise operation.

POWER SOURCE SPECIFICATIONS

AMX Series Power sources can be equipped with output transformers to provide an alternate output voltage range. Selection of direct or transformer coupled range is performed by the controller via front panel or bus command. The standard frequency range for transformer coupled outputs is 45 to 5000 Hz. Standard output ratios are 1.5:1, 2.0:1, and 2.5:1. Transformer outputs are supplied internally or externally via a Magnetics Module. Consult the factory for additional information regarding special output ranges not listed.

UPC CONTROLLER SPECIFICATIONS

The UPC controller is essentially a 3f AC arbitrary waveform generator and Precision AC metering system. Each waveform stored in the UPC is encoded with 12 bit amplitude and 10 bit time resolution for each cycle. The waveform for each phase may be independently selected and may be independently varied in amplitude and phase angle with respect to phase A.

The UPC output metering samples the output volts and amps at 512 samples per measurement using a 12 bit A/D converter. This technique provides exceptional metering accuracy and resolution (20 bits), and delivers a high-fidelity waveform back to a host computer for analysis.

The UPC includes a remote GPIB interface compatible with IEEE 488.2 and SCPI. An available option is an RS-232 serial port that operates up to 38.4 kBaud.

Frequency:	20.00 to 5000 Hz $\pm 0.01\%$	Voltmeter:	Range - 0-354 volts L-N 0-708 volts L-L
Voltage:	Programmable, 0-VMAX, in 0.1 volt steps	Resolution -	0.10VAC to front panel 0.001VAC to remote interface
Direct	(see table on page 6)	Accuracy -	$\pm 0.25\%$ of reading $\pm 0.1\%$ of range (50-500Hz)
Voltage:	Multi-range units are equipped with	Ammeter:	Range - 300% of system current rating
Transformer	output transformers. When alternate range is selected, voltage at transformer output is programmable in steps of 0.5 volts.	Resolution -	0.01AAC to front panel 0.001AAC to remote interface
Accuracy:	Executive voltage is within ± 50 mv (0.03%)	Accuracy -	$\pm 0.25\%$ of reading $\pm 0.1\%$ of range (50-500Hz)
Command	of command voltage, referenced to the		
Voltage	internal voltmeter with CSC engaged.		
Accuracy:	$\pm 0.01\%$, 20-5000 Hz	Power Meter:	Range - Based on ammeter range
Output Zo:	Dynamic output impedance (Z_o) is	Resolution -	1.0 watts or VA to front panel 0.001 Watts or VA to remote interface
(Optional)	programmable, 0 to $\pm Z_o$ max. in 0.1% steps. Z_o value in milliohms varies with different models but usually results in a $\pm 10\%$ change in output voltage at maximum load amps.	Accuracy -	$\pm 1\%$ of Full Scale
Phase:	Phase Angle (f) of Phases B and C	Power Factor:	Calculated and displayed to three significant & Crest Factor digits.
Angle	relative to Phase A is programmable from 0-359° in 1° increments $\pm 0.5^\circ$.	Ext. Input:	Each phase is algebraically summed with UPC waveform and amplified 25X to the direct output.
Current:	Current limit is programmable from 0	Amplitude:	± 10 volt input for each phase
Limit	to Ipeak maximum of the power source. Accuracy is $\pm 1\%$, resolution $\pm 0.05\%$.	Mod. Input	modulates the output $\pm 100\%$
Library:	Stores up to 99 steady state parameter sets consisting of waveform, voltage, frequency, f angle and current limit. Can be executed by program number from the front panel or the bus.	Sync Outputs:	1) Zero crossing, Phase A 2) Transient start-stop 3) True when Transient is enabled 4) Clock - 1024 times the output freq.
Steady State Programs		Command:	Average time to start of parameter change from bus command (end of string character) is 50 ms. Ramp transition time to final value is settable from 250 μ s to 300 sec.
Library:	Stores up to 99 transient programs - one associated with each steady state program.	Response Time	
Transient Programs	Allows for changes in volts and frequency vs. time, or waveform changes by cycle count.	Waveform :	Permits waveform creation by entering % amplitude and phase angle for the 2nd through the 51st harmonics.
Library:	Stores up to 99 waveforms that can be edited and executed in any manner and in any output phase.	Synthesis	
Waveform		Waveform:	Reports voltage and current waveform harmonic content in % and phase angle for the 2nd through the 51st harmonics. Displays THD, OHD, EHD in %.

MANUAL CONTROL OF AC POWER

Provide easy manual control with Pacific's UMC-31 Manual AC Power Controller.

UMC-31 Manual Controller

The UMC-31 provides operational control and high quality oscillator signals for both single and three phase Power Sources.

- Obtain precision frequency and phase conversion for manufacturing and test.
- Provide high quality, general purpose lab power where test versatility is required.
- Achieve low cost and power form flexibility for power supply tests.

SPECIFICATIONS UMC-31 CONTROLLER

- Phase: Select single, split, or three phase operation by internal jumper. Phase angles are fixed at 120° and 240° for three phase operation.
- Frequency: Select 50, 60, or 400 Hz fixed or a variable frequency mode of 45 to 500 Hz.
- Voltage: 0-VMAX via 10 turn potentiometer on the front panel.
- Metering: Autoranging Volts, Amps, and Frequency.

For additional data sheets or technical application assistance, please call or fax Pacific Power Source, attn.: Sales Department.
