# DEBUG IN HIGH DEFINITION

350 MHz – 1 GHz Oscilloscopes

Lowest Noise and Unbelievably Powerful

HD4096 Technology

**Superior User Experience** 

Powerful, Deep Toolbox

**Exceptional Serial Data Tools** 

The HDO6000A with HD4096 Technology provides exceptional signal fidelity with 12-bit resolution and a superior oscilloscope experience to deliver faster time to insight.

## **DEBUG IN HIGH DEFINITION**

High Definition Oscilloscopes with HD Technology have a variety of benefits that allow the user to debug in high definition. Waveforms displayed by High Definition Oscilloscopes are cleaner and crisper. More signal details can be seen and measured; these measurements are made with unmatched precision resulting in better test results and shorter debug time.

Experience HD4096 accuracy, detail, and precision and never use an 8-bit oscilloscope again. Whether the application is general-purpose design and debug, high-precision analog, power electronics, automotive electronics, mechatronics, or other specialized applications, the HD4096 technology provides unsurpassed confidence and measurement capabilities.

#### **Clean, Crisp Waveforms**

When compared to waveforms acquired and displayed using conventional 8-bit oscilloscopes, waveforms captured with HD4096 12-bit technology are dramatically crisper and cleaner, and are displayed more accurately.

#### **More Signal Details**

16x more resolution provides more signal detail. This is especially helpful for wide dynamic range signals in which a full-scale signal must be acquired while at the same time very small amplitude signal details must be analyzed.

#### Unmatched Measurement Precision

HD4096 technology delivers measurement precision several times better than conventional 8-bit oscilloscopes. Higher oscilloscope measurement precision provides better ability to assess corner cases and design margins, perform root cause analysis, and create the best possible solution for any discovered design issue.

HD1024 technology provides 10 bits of vertical resolution with 4 GHz bandwidth. As with all members of Teledyne LeCroy's HDO family, the HDO9000 utilizes an exceptionally low-noise system architecture that delivers outstanding effective number of bits (ENOB). Dynamic ADC Configuration permits the ADC to be set to 8, 9, or 10 bits. Optimized filtering provides additional resolution beyond 10 bits (extending up to 13.8 bits).

## DEBUG IN HIGH DEFINITION

Lowest Noise and Unbelievably Powerful HDO6000A

Deep Toolbox

The HDO6000A with HD4096 Technology provides exceptional signal fidelity with 12-bit resolution and a superior oscilloscope experience to deliver faster time to insight.

Insight alone is not enough. Markets and technologies change too rapidly. The timing of critical design decisions is significant.

Faster Time to Insight is what matters.

## **MAUI® – SUPERIOR USER EXPERIENCE**

## Designed for Touch

MAUI is designed for touch. Operate the oscilloscope just like a phone or tablet with the most unique touch screen features on any oscilloscope. All important controls are always one touch away. Touch the waveform to position or zoom in for more details using intuitive actions. MAUI – Most Advanced User Interface was developed to put all the power and capabilities of the modern oscilloscope right at your fingertips. Designed for touch; all important oscilloscope controls are accessed through the intuitive touch screen. Built for simplicity; time saving shortcuts and intuitive dialogs simplify setup. Made to solve; a deep set of debug and analysis tools helps identify problems and find solutions quickly.

### **Built for Simplicity**

MAUI is built for simplicity. Basic waveform viewing and measurement tools as well as advanced math and analysis capabilities are seamlessly integrated in a single user interface. Time saving shortcuts and intuitive dialogs simplify setup and shorten debug time.

### Made to Solve

MAUI is made to solve. A deep set of integrated debug and analysis tools help identify problems and find solutions quickly. Unsurpassed integration provides critical flexibility when debugging. Solve problems fast with powerful analysis tools.

### MAUI with OneTouch

MAUI with OneTouch introduces a new paradigm for oscilloscope user experience. Dramatically reduce setup time with revolutionary drag and drop actions to copy and setup channels, math functions, and measurement parameters without lifting a finger. Use common gestures like drag, drop, and flick to instinctively interact with the oscilloscope. Quickly enable a new channel, math or measurement using the "Add New" button and simply turn off any trace or parameter with a flick of the finger. These OneTouch innovations provide unsurpassed efficiency in oscilloscope operation.

F

A Channel, timebase, and trigger descriptors provide easy access to controls without navigating menus.

B Configure parameters by touching measurement results.

C Shortcuts to commonly used functions are displayed at the bottom of the channel, math and memory menus.

D Use the "Add New" button for one-touch trace creation.

Drag to copy measurement parameters to streamline setup process.

Drag to quickly position cursors

on a trace.

MAUI 🛛 🛑 Unique to OneTouch

#### Our heritage

Teledyne LeCroy's 50+ year heritage is in processing long records to extract meaningful insight. We invented the digital oscilloscope and many of the additional waveshape analysis tools.

#### Our obsession

Our tools and operating philosophy are standardized across much of our product line. This deep toolbox inspires insight; and your moment of insight is our reward.

#### **Our invitation**

Our Periodic Table of Oscilloscope Tools explains the toolsets that Teledyne LeCroy has deployed in our oscilloscopes. Visit our interactive website to learn more about them. teledynelecroy.com/tools

Teledyne LeCroy HDO high definition oscilloscopes use unique HD4096 technology to provide superior and uncompromised measurement performance:

- 12-bit ADCs with high sample rates
- High signal-to-noise amplifiers (55 dB)
- Low noise system architecture (to 1 GHz)

Oscilloscopes with HD4096 technology have higher resolution than conventional 8-bit oscilloscopes (4096 vs. 256 vertical levels) and low noise for uncompromised measurement performance. The 12-bit ADCs support capture of fast signals and oscilloscope bandwidth ratings up to 1 GHz, and Enhanced Sample Rate to 10 GS/s ensures the highest measurement accuracy and precision. The high performance input amplifiers deliver pristine signal fidelity with a 55 dB signal-to-noise ratio. The low-noise system architecture provides an ideal signal path to ensure that signal details are delivered accurately to the oscilloscope display – 16x closer to perfect.

### 16x Closer to Perfect

#### **16x more resolution**

HD4096 technology provides 12 bits of vertical resolution with 16x more resolution compared to conventional 8-bit oscilloscopes. The 4096 discrete vertical levels reduce the quantization error compared to 256 vertical levels. This improves the accuracy and precision of the signal capture and increases measurement confidence.

## **EXPERIENCE THE DIFFERENCE**

#### **Clean, Crisp Waveforms**

When compared to waveforms acquired and displayed using conventional 8-bit oscilloscopes, waveforms captured with HD4096 12-bit technology are dramatically crisper and cleaner, and are displayed more accurately. Once you see a waveform acquired with HD4096 technology, you will not want to go back to using a conventional 8-bit oscilloscope.

Experience HD4096 accuracy, detail, and precision and never use an 8-bit oscilloscope again. Whether the application is general-purpose design and debug, high-precision analog, power electronics, automotive electronics, mechatronics, or other specialized applications, the HD4096 technology provides unsurpassed confidence and measurement capabilities.

#### **More Signal Details**

16x more resolution provides more signal detail. This is especially helpful for wide dynamic range signals in which a fullscale signal must be acquired while at the same time very small amplitude signal details must be analyzed. 12-bit acquisitions combined with the oscilloscope's vertical and horizontal zoom can be used to obtain unparalleled insight to system behaviors and problems.

#### **Unmatched Measurement Precision**

HD4096 technology delivers measurement precision several times better than conventional 8-bit oscilloscopes. Higher oscilloscope measurement precision provides better ability to assess corner cases and design margins, perform root cause analysis, and create the best possible solution for any discovered design issue.

A Clean, Crisp Waveforms | Thin traces show the actual waveform with minimal noise interference

B More Signal Details | Waveform details lost on an 8-bit oscilloscope can now be clearly seen

Unmatched Measurement Precision | Measurements are more precise and not affected by quantization noise

## HDO6000A AT A GLANCE

HDO6000A oscilloscopes have 4 analog input channels, 12-bit resolution using Teledyne LeCroy's HD4096 high definition technology, up to 1 GHz of bandwidth and a compact form factor with a large 12.1" multi-touch display. They are ideal for debug, troubleshooting, and deep analysis of power electronics designs, digital power management or power integrity analysis, automotive electronics systems, and deeply embedded or mechatronic designs.

#### **Key Features**

4 analog channels

12-bit ADC resolution, up to 15-bit with enhanced resolution

350 MHz, 500 MHz and 1 GHz bandwidths

Long Memory - up to 250 Mpts/Ch

**16 Digital Channel MSO option** 

**Serial Data Toolsets** 

- Trigger
- Decode
- Measure/Graph
- Eye Diagram

12.1" WXGA multi-touch screen display

Wide probe selection for power electronics, embedded electronics, and mechatronics applications

Advanced analysis and reporting toolsets

Advanced Triggering supplemented with TriggerScan and Measurement Trigger

#### **Power Electronics**

Measure single-device(s), half, or Full/H-bridge outputs, including gate-drive voltages. Measure device loss or switch-mode power supply power or control loop performance, including line harmonics. The best performing HV probes support full characterization of all aspects of the power conversion system.

#### **Automotive Electronics**

Automotive electronic control units (ECUs) are tested to stringent standards. 12-bits and 250 Mpts provides the amplitude and time resolution needed for better and more intuitive cause-effect analog signal analysis. Deep digital logic capture and extensive serial data toolsets provides an all-in-one characterization tool for the complex, dynamic behavior of the vehicle ECUs.

#### Digital Power Management, Power Integrity

12-bit accuracy and precision and 1 GHz of bandwidth is perfect for transient rail response, rail voltage power integrity, crosstalk and harmonics evaluation. Specialized probes, analysis software, and serial decoders make fast work of complex embedded system power management and integrity validation.

## Deeply Embedded and Mechatronic Systems

Today's consumer appliances and industrial systems combine complex embedded controls, power electronics, and sensors to achieve the highest efficiency and provide important control and other benefits. Time-to-market, cost and quality pressures place exceptional demands on new product test, debug and troubleshooting.

- 1 Only 13 cm (5") Deep The most space-efficient oscilloscope for your bench from 200 MHz to 1 GHz
- 2 12.1" Widescreen (16 x 9) high resolution WXGA color multi-touch screen display.
- 3 Built-in stylus for touch screen
- "Push" Knobs All knobs have push functionality that provides shortcuts to common actions such as Set to Variable, Find Trigger Level, Zero Offset, and Zero Delay
- 5 Waveform Control Knobs for channel, zoom, math and memory traces
- 6 Dedicated buttons to quickly access popular debug tools
- 7 Easy connectivity with two convenient USB 2.0 ports on the front, four USB 3.1 ports on the side
- 8 Mixed Signal Capability Debug complex embedded designs with integrated 16 channel mixed signal capability
- 9 Rotating and Tilting Feet provide 4 different viewing positions
- Auxiliary Output and Reference Clock Input/Output connectors for connecting to other equipment
- USBTMC (Test and Measurement Class) port simplifies programming

## POWERFUL MIXED SIGNAL CAPABILITIES

The HDO6000A High Definition Oscilloscopes offer powerful mixed signal solutions that combine high definition analog channels with the flexibility of digital inputs. The HDO6000A-MS options provide an integrated 16 digital channels and a 1.25 GS/s sampling rate to create an all-in-one debug machine.

#### Integrated 16-Channel Mixed Signal Capability

With embedded systems growing more complex, powerful mixed signal debug capabilities are an essential part of modern oscilloscopes. The 16 integrated digital channels and set of tools designed to view, measure and analyze analog and digital signals enable fast debugging of mixed signal designs.

#### Advanced Digital Debug Tools

Using the powerful parallel pattern search capability of WaveScan, patterns across many digital lines can be isolated and analyzed. Identified patterns are presented in a table with timestamp information and enables quick searching for each pattern occurrence.

Use a variety of the many timing parameters to measure and analyze the characteristics of digital busses. Powerful tools like tracks, trends, statistics and histicons provide additional insight and help find anomalies. Quickly see the state of all the digital lines at the same time using convenient activity indicators.

Simulate complete digital designs using logic gate emulation. When used with the web editor, many logic gates can be combined together in one math function to simulate complex logic designs. Choose from AND, OR, NAND, NOR, XOR, NOT and D Flip Flop gates.

#### **Extensive Triggering**

Flexible analog and digital cross-pattern triggering across all 20 channels provides the ability to quickly identify and isolate problems in an embedded system. Event triggering can be configured to arm on an analog signal and trigger on a digital pattern.

#### WaveScan Advanced Search

WaveScan provides powerful isolation capabilities that hardware triggers can't provide. WaveScan allows searching analog, digital or parallel bus signal in a single acquisition using more than 20 different criteria. Or, set up a scan condition and scan for an event over hours or even days. Digital logic patterns can be scanned using the parallel pattern search. Found events can shown in a table, overlaid in a ScanOverlay for quick visual comparison, or displayed as a ScanHistogram to show the statistical distribution of the events.

#### **Advanced Math and Measure**

"All instance" measurements ensure thousands of measurements in a single acquisition. Histograms and Histicons graphically display statistical distributions of up to 2 billion measurement values. Tracks show variation of measurement values over time. Trends provide chart recorder-like views of measurements over many hours or days. More standard measurements and math functions are included than in any other oscilloscope – unleash your potential.

#### **History Mode Waveform Playback**

Scroll back in time using History Mode to view previous waveforms and isolate anomalies. Use cursors and measurement parameters to quickly find the source of problems. History mode is always available with a single button press, no need to enable this mode and never miss a waveform. Or use Sequence acquisition mode to capture many fast pulses in quick succession or separated by long periods of time.

### SPECTRUM ANALYZER MODE

#### **Key Features**

Spectrum analyzer style controls for the oscilloscope

**Dual Spectrum Capability** 

Select from six vertical scales (in dB, V, or A)

Automatic frequency peak identifications

Display up to 20 markers, with interactive table readout of frequencies and levels

Easily make measurements with reference and delta markers

Automatically identify and mark fundamental frequency and harmonics

Spectrogram shows how spectra changes over time in 2D or 3D views

Use two independent input settings and frequency ranges for advanced spectrum analysis.

#### Simplify Analysis of FFT Power Spectrum

Get faster and better insight to the frequency content of any signal with use of the Spectrum Analyzer mode on the HDO6000A. This mode provides a spectrum analyzer style user interface with controls for start/stop frequency or center frequency and span. The resolution bandwidth is automatically set for best analysis or can be manually selected. Peak search automatically labels spectral components and presents frequency and level in an interactive table. Utilize up to 20 markers to automatically identify harmonics and quickly analyze frequency content by making measurements between reference and delta markers. Spectrograms display a 2D or 3D history of the frequency content to provided insight into how the spectrum changes over time.

Spectrum analyzer style controls simplify waveform analysis in the frequency domain.

#### LabNotebook Documentation Tool

LabNotebook is a standard feature of HDO6000A and is the ideal documentation tool. LabNotebook automatically saves all displayed waveforms, oscilloscope setup file, and a screen image with a single button press, eliminating the need to navigate multiple menus to save all these files independently. Report files can be annotated and shared with colleagues to fully document all results. Easily recreate experiments and compare tests results amongst colleagues across the world by recalling LabNotebook files back onto the oscilloscope or view on a PC using WaveStudio.

#### Serial Trigger, Decode, Measure/Graph, and Eye Diagram (TDME) Options

Isolate events using the serial bus trigger and view color-coded protocol information on top of analog or digital waveforms. Timing and bus measurements allow quick and easy characterization of a serial data system. Serial (digital) data can be extracted and graphed to monitor system performance over time. Identify physical layer anomalies with eye diagram mask testing and mask failure locator.

## **EXCEPTIONAL SERIAL DATA TOOLS**

The HDO6000A features the widest range and most complete serial data debug toolsets.

- Triggering
- Decoding
- Measurement and Graphing
- Eye Diagram and Physical Layer Analysis

## Solutions address the following markets and applications:

- Embedded Computing
- Automotive
- Industrial
- Military and Avionics
- Peripherals
- Handset/Mobile/Cellular
- Serial Digital Audio

#### Trigger

Powerful, flexible triggers designed by people who know the standards, with the unique capabilities you want to isolate unusual events. Conditional data triggering permits maximum flexibility and highly adaptable error frame triggering is available to isolate error conditions. Efficiently acquire bursted data using Sequence Mode to maximize the oscilloscope's memory usage. Sequence Mode enables the oscilloscope to ignore idle time and acquire only data of interest.

#### Decode

Decoded protocol information is colorcoded to specific portions of the serial data waveform and transparently overlaid for an intuitive, easy-tounderstand visual record. All decoded protocols are displayed in a single time-interleaved table. Touch a row in the interactive table to quickly zoom to a packet of interest and select a column header to create filter criteria, as is commonly done in spreadsheets. Easily search through long records for specific protocol events using the builtin search feature.

#### Measure/Graph

Quickly validate cause and effect with automated timing measurements to or from an analog signal or another serial message. Make multiple measurements in a single long acquisition to quickly acquire statistics during cornercase testing. Serial (digital) data can be extracted to an analog value and graphed to monitor system performance over time, as if it was probed directly. Complete validation faster and gain better insight.

#### Eye Diagram

Rapidly display an eye diagram of your packetized low-speed serial data signal without additional setup time. Use eye parameters to quantify system performance and apply a standard or custom mask to identify anomalies. Mask failures can be indicated and can force the scope into Stop mode.

## **POWER ANALYSIS OPTION**

#### **Key Features**

Automated measurement zone identification with color-coded overlays

Control loop and time domain response analysis

Line power and harmonics tests to IEC 61000-3-2

Total harmonic distortion table shows frequency contribution

B-H Curve shows magnetic device saturation

#### Power Analyzer Automates Switching Device Loss Measurements

Quickly measure and analyze the operating characteristics of power conversion devices and circuits with the Power Analyzer option. Critical power switching device measurements, control loop modulation analysis, and line power harmonic testing are all simplified with a dedicated user interface and automatic measurements. Areas of turn-on, turn-off, and conduction loss are all identified with colorcoded waveform overlays for faster analysis.

Power Analyzer provides quick and easy setup of voltage and current inputs and makes measurements as simple as the push of a button. Tools are provided to help reduce sources of measurement errors and the measurement parameters provide details of single cycle or average device power losses.

Beyond the advanced power loss measurement capabilities, the Power Analyzer modulation analysis capabilities provide insight to understand control loop response to critical events such as a power supply's soft start performance or step response to line and load changes. The Line Power Analysis tool allows simple and quick pre-compliance testing to EN 61000-3-2.

## **APPLICATION-SPECIFIC SOFTWARE OPTIONS**

#### Jitter and Timing Analysis Option (HDO6K-JITKIT)

JITKIT makes it simple and easy to understand the basic system jitter performance of clock signals and clock-data activities. It quickly provides four views of jitter (JitTrack, JitOverlay, JitHistogram and JitSpectrum) and time-correlation to causal or other events shown in acquired channels or math traces. A convenient table provides direct readout of jitter values (any eight of more than 25 provided jitter measurements).

#### EMC Pulse Parameter Analysis Option (HDO6K-EMC)

The EMC software package provides customizable parameters to measure rise time, fall time, or width characteristics according to specific EMC/ESD standards for ESD, EFT, Surge, or Transient pulses, of Voltage Dips and Interrupts. Level selections can be made to ignore undershoot, overshoot, or tail perturbations, making it easy to capture and verify repetitive pulse sequences without the need to use time-consuming cursors.

#### Digital Power Management and Power Integrity Analysis Option (HDO6K-DIG-PWR-MGMT)

The DIG-PWR-MGMT package translates complicated multi-phase PMIC, VRM, POL, LDO and other DC rail behaviors into per-cycle measurements and Waveforms to provide complete and fast understanding of power rail behaviors, such as ripple, ringing, droop, noise, settling time, etc. Ideally used with the RP4030 Active Voltage/ Power Rail Probe..

#### Digital Filter Software Option (HDO6K-DFP2)

DFP2 lets you implement Finite Impulse Response (FIR) or Infinite Impulse Response (IIR) filters to eliminate undesired spectral components, such as noise, and enhances your ability to examine important signal components. You can choose from a standard set of FIR or IIR filters or you can also design your own custom filters. Create and apply a variety of FIR and IIR digital filters to your capture waveforms or processed traces.

#### XDEV Advanced Customization Option (HDO6K-XDEV)

With the XDEV option, third party programs can be completely integrated into the oscilloscope's processing stream. Create customized math functions and parameters using C/C++, MATLAB®, Excel, JScript or Visual Basic without ever leaving the oscilloscope application - and view the results directly on the oscilloscope, in real-time.

#### VectorLinQ VSA Option (HD06K-VECTORLINQ)

The VectorLinQ Vector Signal Analysis (VSA) option provides an extensive toolset for demodulation and analysis of RF and IQ modulated signals. These tools provide deep insight into advanced signal types with maximum measurement flexibility and sophisticated signal visualization. The intuitive user interface is easy to set up and allows for user customization to meet the needs of even the most complex signals.

#### Teledyne LeCroy offers an extensive range of probes to meet virtually every probing need.

ZS Series High Impedance Active Probes ZS1000, ZS1000-QUADPAK ZS1500, ZS1500-QUADPAK	High input impedance $(1 M\Omega)$ , low 0.9 pF input capacitance and an extensive set of probe tips and ground accessories make these low-cost single-ended probes ideal for a wide range of applications. The ZS Series is available up to 4 GHz bandwidth.
Differential Probes           (200 MHz - 1.5 GHz)           ZD1500, ZD1000,           ZD500, ZD200           AP033	High bandwidth, excellent common-mode rejection ratio (CMRR) and low noise make these active differential probes ideal for applications such as automotive electronics and data communications. AP033 provides 10x gain for high- sensitivity measurement of series/shunt resistor voltages.
Active Voltage/Power Rail Probe RP4030	Specifically designed to probe a low impedance power/ voltage rail. The RP4030 has 30V built-in offset adjust, low attenuation (noise), and high DC input impedance with 4 GHz of bandwidth and a wide assortment of tips and leads, including solder-in and U.FL receptacle connections.
High Voltage Fiber Optically-isolated Probe HVF0103	The HVF0103 is a compact, simple, affordable probe for measurement of small signals (gate-drives, sensors, etc.) floating on an HV bus in power electronics designs, or for EMC, EFT, ESD, and RF immunity testing sensor monitoring. Suitable for up to 35kV common-mode. 140 dB CMRR.
HVD Series High Voltage Differential Probes HVD3102, HVD3106 (1 kV) HVD3206 (2 kV) HVD3605 (6 kV)	Available with 1, 2 or 6kV common-mode ratings. Excellent CMRR (65 dB @ 1 MHz) at high frequencies is combined with low inherent noise, wide differential voltage range, high offset voltage capabilities, and 1% gain accuracy. The ideal probe for power conversion system test.
High Voltage Passive Probes HVP120, PPE4KV, PPE5KV, PPE6KV	The HVP and PPE Series includes four fixed-attenuation probes covering a range from 1 kV to 6 kV. These probes are ideal for lightning/surge or EFT testing, or for probing in-circuit beyond the range of a LV-rate passive probe.
Current Probes CP030, CP030-3M, CP030A CP031, CP031A CP150, CP150-6M CP500, DCS015	Available in bandwidths up to 100 MHz with peak currents of 700 A and sensitivities to 1 mA/div. Extra-long cables (3 or 6 meters) available on some models. Ideal for component or power conversion system input/output measurements. DCS015 deskew calibration source also available.
Probe and Current Sensor Adapters TPA10, TPA10-QUADPAK CA10, CA10-QUADPAK	TPA10 adapts supported Tektronix TekProbe-compatible probes to Teledyne LeCroy ProBus interface. CA10 is a programmable adapter for third-party current sensors that have voltage or current outputs proportional to measured current. QUADPAKs of four pieces each are available.

## **ORDERING INFORMATION**

Product Description	Product Code
Probes and Amplifiers	
500 MHz Passive Probe, 10:1, 10 MΩ	PP018
500 MHz Passive Probe, 2.5mm, 10:1, 10 MΩ	PP023
500 MHz Passive Probe, 5mm, 10:1, 10 MΩ	PP026
Power/Voltage Rail Probe. 4 GHz bandwidth,	RP4030
1.2x attenuation, ±30V offset, ±800mV	
Browser for use with RP4030	RP4000-BROWSER
1,500 V, 120 MHz High-Voltage Differential Probe	HVD3106A
1kV, 80 MHz High Voltage Differential Probe with 6m ca	able HVD3106A-6M
1kV, 120 MHz High Voltage Differential Probe without	HVD3106A-NOACC
tip Accessories	
1,500 V, 25 MHz High-Voltage Differential Probe	HVD3102A
1kV, 25 MHz High Voltage Differential Probe without	HVD3102A-NOACC
tip Accessories	
2kV, 120 MHz High Voltage Differential Probe	HVD3206A
2kV, 80 MHz High Voltage Differential Probe with 6m ca	able HVD3206A-6M
6kV, 100 MHz High Voltage Differential Probe	HVD3605A
High Voltage Fiber Optic Probe, 60 MHz (requires acces	s- HVF0103A
sory tip)	
±1V (1x) Tip Accessory for HVF0103	HVF0100-1X-TIP-U
±5V (5x) Tip Accessory for HVF0103	HVF0100-5X-TIP-U
±10V (10x) Tip Accessory for HVF0103	HVF0100-10X-TIP-U
±20V (20x) Tip Accessory for HVF0103	HVF0100-20X-TIP-U
±40V (40x) Tip Accessory for HVF0103	HVF0100-40X-TIP-U
30 A; 100 MHz Current Probe – AC/DC; 30 Arms; 50 Apeak	
30A, 100 MHz High Sensitivity Current Probe - AC/DC, 3	80 A <sub>rms</sub> , CP031A
50 A <sub>peak</sub> Pulse, 1.5 meter cable	
<u>30 A; 50 MHz Current Probe – AC/DC; 30 A, 50 A, Pu</u>	
30 A, 10 MHz Current Probe - AC/DC, 30 A rms, 50 A Pe	ak Pulse, CP030-3M
3 meter cable	
30A, 50 MHz High Sensitivity Current Probe - AC/DC, 30	Arms, CP030A
50 A <sub>peak</sub> Pulse, 1.5 meter cable	
<u>150 A; 10 MHz Current Probe – AC/DC; 150 A, 500 A, 500 A</u>	
150 A, 5 MHz Current Probe - AC/DC, 150 A rms, 500 A	Peak CP150-6M
Pulse, 6 meter cable	
500 A; 2 MHz Current Probe – AC/DC; 500 A <sub>rms</sub> ; 700 A <sub>peak</sub>	
Deskew Calibration Source for CP030, CP030A, CP031,	CP031A, DCS025

CP150, CP500

#### **Product Description Product Code** Probes and Amplifiers (cont'd) AP033 500 MHz Differential Probe 200 MHz, 3.5 pF, 1 M $\Omega$ Active Differential Probe, ±20 V, 60V ZD200 common-mode ZD500 500 MHz, 1.0 pF Active Differential Probe, ±8 V 1 GHz, 1.0 pF, 1 MΩ Active Differential Probe, ZD1000 ±8 V, 10V common-mode 1.5 GHz, 1.0 pF, 1 MΩ Active Differential Probe, ZD1500 ±8 V, 10V common-mode 1 GHz, 0.9 pF, 1 MΩ High Impedance Active Probe ZS1000 Set of 4 ZS1000 ZS1000-QUADPAK 1.5 GHz, 0.9 pF, 1 MΩ High Impedance Active Probe ZS1500 ZS1500-QUADPAK Set of 4 ZS1500 400 MHz, 1kV Vrms High-Voltage Passive Probe HVP120 100:1 400 MHz 50 M $\Omega$ 4 kV High-voltage Probe PPE4KV 1000:1 400 MHz 50 MΩ 5 kV High-voltage Probe PPE5KV 1000:1 400 MHz 50 MΩ 6 kV High-voltage Probe PPE6KV TekProbe to ProBus Probe Adapter TPA10

Programmable Current Sensor to ProBus Adapter for use with CA10 third party current sensors

#### **Customer Service**

Teledyne LeCroy oscilloscopes and probes are designed, built, and tested to ensure high reliability. In the unlikely event you experience difficulties, our digital oscilloscopes are fully warranted for three years and our probes are warranted for one year. This warranty includes:

- No charge for return shipping
- Long-term 7-year support
- Upgrade to latest software at no charge

1-800-5-LeCroy teledynelecroy.com Local sales offices are located throughout the world. Visit our website to find the most convenient location.
