

5700A

modular design increases reliability and makes problems easy to find and repair when they occur.

Simplified Calibration Support

Only three Artifact Standards, a 10V dc reference and 1Ω and 10 kΩ resistance references, are required to calibrate all 5700A ranges and functions to full specifications. The process, running under the control of the calibrator, takes about one hour. Instructions are displayed on the front panel in plain English to prompt the operator when to make various connections and inputs. For added confidence, Fluke recommends that a full verification of the 5700A be performed every two years or as required by your established procedures.

The 5700A does not need to be recalled to the standards laboratory for calibration. Due to its unique, environmentally tolerant design, the 5700A may be calibrated wherever it is used, at any temperature between 15°C and 35°C. Full performance is available for ±5°C of that temperature.

Complete Confidence

Between Artifact Calibrations, the 5700A's performance may be checked against its internal standards. Without adjusting the instrument, an automated procedure is available to check each range and function against internal check standards to increase your confidence that it is within performance tolerances. Should any range be shown to be out of specification, the operator is alerted. All results of this Cal Check process can be printed via RS-232 port. This data can be used to develop control charts to predict the long-term performance of the calibrator.

High Performance That's Easy to Use

In the past, calibration of precision DMMs required a host of complex, manually operated instruments and standards.

The 5700A combines the functions of these instruments to dramatically simplify DMM calibration. Values are entered on the simple numeric keyboard and displayed on the front panel.

5700A Calibrator

- Covers the complete DMM calibration workload
- Precision performance that is easy to use
- Simplified support with Artifact Calibration
- Compatible to protect your investment

Wide Workload Coverage

The Fluke 5700A is designed to cover the widest portion of today's calibration workload - a wide variety of DMMs from all manufacturers. It delivers direct voltage to 1100V and alternating voltage from 220 μV to 1100V at frequencies from 10 Hz to 1.2 MHz. Cardinal point resistances range from 1Ω to 100 MΩ in x1 and x1.9 decades, including a short. Direct and alternating current are provided to 2.2A, and frequencies for alternating current range from 10 Hz to 10 kHz.

One option is offered, wideband voltage (-03). It provides flat, low-noise alternating voltage output from 10 Hz to 30 MHz to extend workload coverage to include RF voltmeters. Output may be selected in volts or dBm referenced to 50Ω.

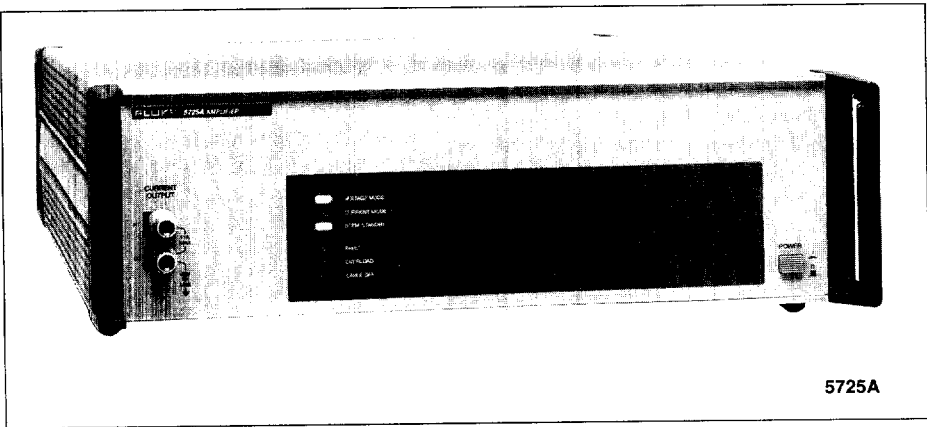

The companion 5725A Amplifier extends the 5700A's workload coverage still further. It increases maximum direct and alternating current to 11A for calibrating the high current ranges of popular low-cost and hand-held DMMs. And it extends the calibrator's alternating volt-hertz product to 1100V at 30 kHz and 750V at 100 kHz to cover the calibration requirements of high-accuracy bench and system meters.

The 5700A is designed to be taken to the workload. In manufacturing applications, test instruments may be calibrated on-site, minimizing production line downtime due to calibration recall.

Low Cost of Ownership

The original purchase price is not the most significant cost associated with owning a high accuracy calibrator. Once the instrument is on the job, a wide range of calibration, maintenance, repair and training requirements increase its cost of ownership beyond the original purchase price many times over.

The 5700A Calibrator was designed to keep those traditional ownership costs down. Its powerful features are easy to use. Advanced internal metrology dramatically reduces support requirements while increasing your confidence in the instrument's performance. And its rugged,

5725A

The command is confirmed with the ENTER key. To verify the reading of the UUT, the operator simply adjusts the output knob and the error is displayed directly in ppm or %. Output values can be selected for editing using the arrow keys. Using the OFFSET and SCALE keys, the 5700A compensates for meter zero offset and scale errors and directly displays linearity errors at any scale level. The x10 and +10 keys simplify work on meters requiring calibration levels in even decade steps. Just multiply or divide any output value by pressing the corresponding key.

To protect the operator and UUT, limits on maximum output can be preset. For additional operator protection, the 5700A resets to standby mode when output is increased to more than 22V.

Compatibility

The 5700A is designed to protect your investment in existing Fluke instruments and procedures. For example, a Fluke 5205A or 5215A voltage amplifier, and a Fluke 5220A transconductance amplifier may be connected directly to the 5700A through dedicated ports. In automated systems, the 5700A may be configured to emulate a 5100B so that existing procedures can be run with minimal modification.

Designed for Reliability

Another important factor in keeping instrument cost of ownership low is product reliability. Throughout its design and manufacture, the 5700A has been engineered to be the most reliable instrument of its type. Statistical process control techniques assure that quality is maintained, from component test through final assembly. Every 5700A is subjected to more than 2g of random vibration to prevent subtle imperfections from causing failures later on. A stiff chassis permits the 5700A to be moved with minimal risk of damage. Internal DIN connectors seal out potential environmental problems while keeping circuit boards firmly connected. Internal diagnostics exercise both digital and analog functions and can isolate problems to the board level, so repair often requires nothing more than the replacement of a plug-in module.

Specification Summary*

To simplify evaluation of how the 5700A covers your calibration workload, use the 5700A absolute uncertainty specifications.

Absolute Uncertainty includes stability, tem-

Specifications

DC Voltage

Range	Resolution	Absolute Uncertainty: $\pm 5^{\circ}\text{C}$ from Calibration Temperature			
		24 Hours	90 Days	180 Days	1 Year

perature coefficient, linearity, line and load regulation, and the traceability of external standards. You do not need to add anything to determine the ratios between 5700A uncertainties and the uncertainties of your calibration workload.

* Complete 5700A and 5725 specifications are available. Ask for Fluke document A0296.

Resistance

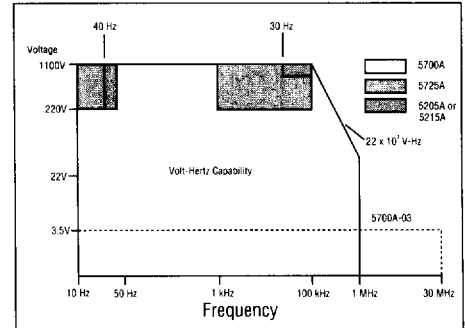

Seventeen passive resistance values are supplied in x1.0 and x1.9 multiples, plus a short to

allow complete resistance calibration without moving test leads. Actual values assigned during calibration are displayed and used as reference points for error calculations.

For calibration of higher accuracy meters, 4-wire output connection is provided, with absolute uncertainties as shown in the table. Active 2-wire compensation is available for calibration of less accurate ohmmeters with 2-wire inputs. This feature substantially eliminates errors due to test lead resistance, and may be selected for resistance values up to 19 k Ω .

Current

The 5700A supplies direct alternating current to 2.2A, extended to 11A with the 5725A Amplifier or to 20A with the 5220A Transconductance Amplifier. 5700A current output is available on front or rear voltage output terminals. For convenience in calibrating meters with separate current terminals, 5700A outputs may also be directed either to an auxiliary front panel current terminal or to 5725A front or rear terminals. This allows automated meter calibration without moving test leads.

For system applications, a rear panel current guard provides a voltage follower output for guarding low level current through longer system cables.

20M-30M	1M	1.5 + 15 μV	1.5 + 3 μV	1 + 3 μV

Additional Operating Information:

dBm reference = 50Ω

Range boundaries are at voltage points, dBm levels are approximate.

$$\text{dBm} = 10 \log \left(\frac{\text{Power}}{1 \text{ mW}} \right)$$

for 50Ω: 0 dBm = 1 mW across 50Ω = 0.22361V

Minimum Output: 300 μV (-57 dBm)

Frequency Uncertainty: ±0.01%

Overload Protection: A short circuit on the wideband output will not result in damage. After settling time, normal operation is restored upon removal.

General Specifications

Warm-up Time: 2x the time since last warmed up, to a maximum of 30 minutes.

System Installation: Rear output configuration and rackmount kit available.

Standard Interfaces: IEEE-488, RS-232, 5725A, 5205A or 5215A, 5220A, phase lock in (BNC), phase reference out (BNC).

Temperature Performance: Operating: 0°C to 50°C. Calibration: 15°C to 35°C. Storage: -40°C to 75°C. Tested for compliance with MIL-T-28800D, para. 4.5.5.1.1, Class 5.

Relative Humidity: Operating: <90% to 30°C, <70% to 40°C, <40% to 50°C. Storage <95%, non-condensing. Tested for compliance with MIL-T-28800D, para. 4.5.5.1.1, Class 5.

Safety: Designed to comply with UL 1244 (1987); IEC 348-1978I IEC 66E (CO) 4; CSA 556B.

Guard Isolation: 20 volts

EMI/RFI: Designed to comply with FCC Rules Part 15, Subpart J, Class B; VDE 0871, Class B.

Vibration: Tested for compliance with MIL-T-28800D, para. 4.5.5.3.1, Class 5.

Physical Shock: Tested for compliance with MIL-T-2800C, para. 4.5.5.4.1, Class 5.

Reliability: MIL-T-28800D, para. 3.13.3

Line Power: 47 to 63 Hz; ±10% allowed about selectable nominal line voltage: 100V, 110V, 115V, 120V, 200V, 220V, 230V, 240V.

Maximum Power: 5700A, 300VA; 5725A, 750VA.

Size

5700A: Height 17.8 cm (7 in), standard rack increment, plus 1.5 cm (0.6in) for feet; width 43.2 cm (17 in), standard rack width; depth 63.0 cm (24.8), overall; 57.8 cm (22.7 in), rack depth.

5725A: Height 13.3 cm (5.25 in); width and depth same as 5700A; Both units project 5.1 cm (2 in) from rack front

Weight: 5700A: 27kg (62lb); 5725A: 32kg (70 lb)

All ranges and functions of the 5700A, 5725A and Wideband Voltage option may be calibrated using just three Artifact Standards.

Calibration Requirements

Calibrating the 5700A to full specified absolute uncertainty requires only the following standards:

Fluke Standard	Traceable Quantity	Nominal Value	Uncertainty*
732A	Voltage	10V	±1.5 ppm
742A-1	Resistance	1Ω	±10 ppm
742A-10k	Resistance	10 kΩ	±4 ppm

*Relative to national standards

The 5700A's simple, built-in, self-prompting calibration procedure is designed to use the portable Fluke standards to completely calibrated all of its functions.

Calibration may be done at any temperature from 15°C to 35°C without change to any specification except for resistance. Resistance specifications are modified by a small temperature coefficient when the 5700A is calibrated below 19°C or above 24°C.

You may use standards with different uncertainties than given in the table at left. Absolute uncertainty must then be modified by the algebraic difference between the uncertainty of the standard used and that in the table. For example if the dc voltage standard has an uncertainty of ±2.5 ppm, 5700A dc Voltage absolute uncertainty specifications will all be increased by ±1 ppm. Note that dc and ac current specifications include the uncertainties of both the dc voltage and resistance standards that are used.

Ordering Information

Models	January 1990 prices
5700A Calibrator	\$21,950
5700A-01 Calibrator, Rear Output Option*	0
5725A Amplifier	8350
5725A-01 Amplifier, Rear Output Option*	0

*Factory installed only

Option

5700A-03 Wideband AC Voltage	\$4250
------------------------------------	--------

Accessories (Also see Section 17)

5440A-7002 Low Thermal Cable Set	\$ 350
732A DC Voltage Reference Standard	3800
742A-1 1Ω Resistance Standard	895
742A-10k 10 kΩ Resistance Standard	895
Y5701 Cable for 5205A or 5215A	250
Y5702 Cable for 5220A	250
Y5737 Rackmount Kit with 24" slides for 5700A*	110
Y5735 Rackmount Kit with 24" slides for 5725A*	110
Y8021 Shielded IEEE-488 Cable, 1m	130
Y8022 Shielded IEEE-488 Cable, 2m	145
Y8023 Shielded IEEE-488 Cable, 4m	155

*Note: These rack slides allow for side ventilation.

Customer Support Services

Warranty

One-year product warranty. See Section 16 for further information on warranty terms and conditions.

Extended Warranty

A 10% discount is available when you order the following at the time of the instrument purchase or when ordered within the factory warranty period.

SC1-5700A Repair	\$ 227
SC2-5700A Calibration	95
SC3-5700A Full Service	297
SC1-5725A Repair	110
SC2-5725A Calibration	63
SC3-5725A Full Service	161

Note: Incoming and/or outgoing calibration readings are available as an option.
