### HP 8560 Series Spectrum Analyzers

These portable spectrum analyzers are HP's highest performing portables. They combine MIL-rugged packaging, synthesized tuning, and HP's traditional ease of use as standard features.

The HP 8560A\* has a frequency range of 50 Hz to 2.9 GHz. A built-in tracking generator is optional. The HP 8561B\* extends from 50 Hz to 6.5 GHz. For higher, preselected frequency coverage, the HP 8562A and 8563A\* operate from 9 kHz to 22 GHz or to 26.5 GHz with option 026. Using HP 11974A series millimeter mixers, preselected coverage reaches 75 GHz, and with other mixers, unpreselected coverage can be extended to 325 GHz. (See page 187 for information on HP millimeter mixers.)

### Rugged For Field Service

The HP 8560 series meets all MIL-T-28800C requirements, including those for temperature, pulse shock, and transit drop. These analyzers are warmed up and running in only five minutes. They fully meet specifications in temperatures from -10 degrees to +55 degrees C. They can withstand 30 g's of shock.

### Narrow Digital Resolution Bandwidths

For fast, accurate measurements of closely spaced signals, the HP 8560A, 8561B, and 8563A feature digital 10-, 30-, and 100-Hz resolution bandwidths. These bandwidths allow the analyzers to sweep up \*Contact your HP sales representative for information about options for general export.

to 20 times faster than do conventional analog bandwidths. Digital bandwidths also provide the spectrum analyzer CRT with a calibrated measurement range of 100 dB.

### Improved Frequency Accuracy

An optional precision frequency reference improves frequency accuracy to 150 Hz at 1 GHz after a 15 minute warmup (1 year aging).

### Specified Pulse Response

These portable analyzers easily capture and accurately display short-duration radar pulses. Specified pulse-digitization uncertainty is 1.25 dB and typical repeatability is 0.2 dB.

### Accessories

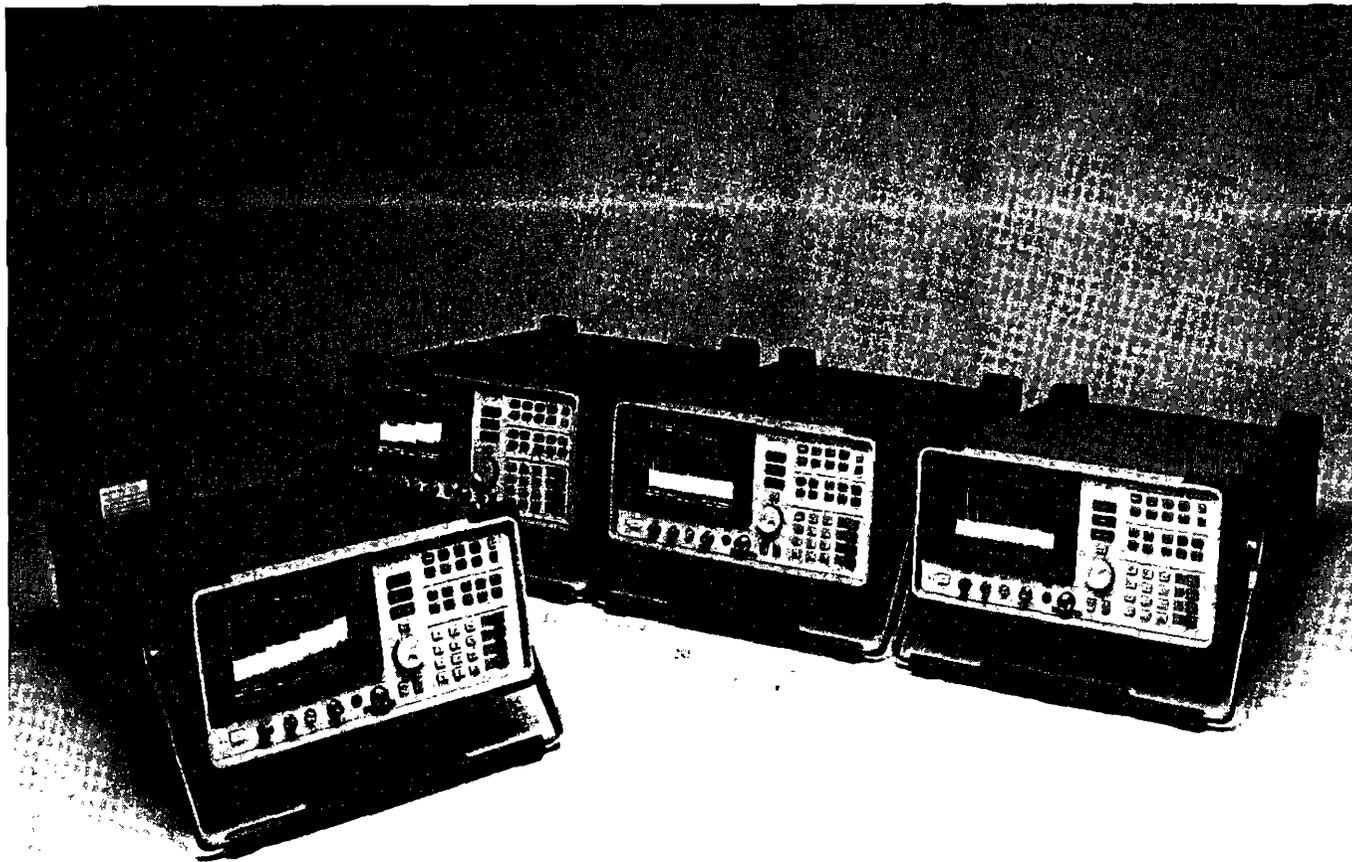

A number of accessories increase the power and performance of the HP 8560 series spectrum analyzers.

- The HP 85640A portable tracking generator and the built-in tracking generator for the HP 8560A add component-test capability to 2.9 GHz.
- The HP 85620A mass memory module adds extra memory and controller capability.
- The HP 85710A digital radio measurement personality customizes the spectrum analyzer for digital radio measurements. For details on these options, see page 183.

## HP 8560A and 8561B RF Spectrum Analyzers

The HP 8560A and 8561B offer excellent performance for RF design and service applications. The HP 8560A has a frequency range of 50 Hz to 2.9 GHz and the HP 8561B extends this range up to 6.5 GHz. Both have synthesized tuning for drift-free, accurate measurements. They also have sensitivity of  $-130$  dBm and digital bandwidths of 10, 30, and 100 Hz. Both analyzers meet MIL-T-28800C specifications for ruggedness.

Manual control is simple with an easy-to-use combination of hardkeys and softkeys that minimizes the number of keystrokes required to make measurements. Other measurement features include advanced marker capability and built-in AM and FM demodulators. Hardcopies of results are easily obtained using the analyzers' direct print and plot functions or by using a computer.

Scalar measurement capability is available by adding an optional built-in tracking generator to the HP 8560A or by using the HP 85640A portable tracking generator with either analyzer. For millimeter applications that don't require full microwave coverage, the HP 8560A and 8561B provide lower cost solutions. Both are compatible with HP 11970 series harmonic mixers and HP 11974 series preselected millimeter mixers. For very precise measurements, consider an optional precision frequency reference. It gives frequency accuracy of 150 Hz at 1 GHz. See page 183 for more information on options and accessories.

## HP 8562A and 8563A Microwave Spectrum Analyzers

The HP 8562A and 8563A extend the features and capabilities of the RF members of the HP 8560 series into the microwave frequency range. In addition, both the HP 8562A and the new HP 8563A have standard, preselected frequency ranges of 9 kHz to 22 GHz that can be extended to 26.5 GHz with option 026. Their internal preselector requires no adjustment after 30 minutes at room temperature. This means faster measurements, which can be especially important in automated testing. For millimeter-wave measurements, preselection can be extended to 75 GHz using the HP 11974 series millimeter mixers. Unpreselected frequency range can be extended to 110 GHz using the HP 11970A series mixers and to 325 GHz using mixers from other manufacturers. (See page 187 for more information on HP millimeter mixers.)

The HP 8562A has sensitivity of  $-110$  dBm. The HP 8563A has sensitivity of  $-120$  dBm and digital resolution bandwidths of 10, 30, and 100 Hz. The HP 8563A also features 128 Kbytes of battery-backed RAM that stores up to 100 traces and states; limit-line capability for defining test criteria; and a built-in clock/calendar for stamping traces and other output data. (These features can be added to the HP 8562A with the mass memory module accessory.) Enhance the capabilities of both the HP 8562A and the 8563A with any of the accessories described on page 183.
