MFT-X1

Multifunction tester

- True LoopTM test with patented Confidence MeterTM
- CertSuite Installation compatible Bluetooth® result transfer
- Next generation 2-wire and 3-wire non-trip loop testing
- User upgradeable operating system
- High resolution 0.001Ω loop test
- Automatic volt-drop measurement
- Stabilised insulation test voltage
- Configurable RCD and EV auto-sequence tests
- Fast switch rechargeable plug-in battery pack
- Full colour TFT bonded display
- Re-designed lead set and carry case solution
- IP54 operational housing

DESCRIPTION

The MFT-X1 new electrical installation testing platform MFT-X1 is the first of a new generation of firmware upgradeable, full functionality multi-function testers for low voltage electrical installations.

Intended for use on all low voltage electrical installations including EV charge points and domestic photo-voltaic systems, the range of test capabilities allow for general commissioning of installations and periodic maintenance as well as detailed fault diagnostics.

FEATURES

True Loop™

True Loop™ impedance testing is now a standard feature on the MFT-X1. The latest 3-wire non-trip loop testing technology, incorporated with the patented Confidence Meter™, offers an unmatched, reliable, accurate, stable and repeatable loop test solution to the user, allowing testing in the most hostile high noise conditions or close to the source of supply. The technology also removes the risk of RCD uplift whilst reducing typical test times – even on circuits protected by 10 mA protective devices.

Patented Confidence meter technology

All loop impedance ranges are now supported by the Megger patented Confidence meter technology, reducing typical test times for non-trip loop testing to around 7 seconds on quiet circuits, and providing optimised test times for loop impedance testing in difficult noisy supplies. The Confidence meter shows the progress of the loop measurement and indicates the presence of noise on the circuit, removing erroneous values to give a stable and consistent result.

MFT-X1 result downloading and CertSuite Installation

Test results can be tagged with circuit data and transferred to CertSuite Installation, the latest cloud base electrical certification software package from Megger.

When connected to a mobile device using the low energy Bluetooth® mode, results can be sent directly from the MFT-X1 to an Android or IOS device running Megger CertSuite software. These results are also synchronised with the cloud-based application.

With a wide range of certification options, CertSuite Installation is available as a monthly or yearly subscription package for electrical certification of installations taking results directly from the MFT whilst testing. CertSuite Installation is suitable for multiple concurrent users and is optimised for use with the MFT-X1.

Multifunction tester

Results can be stored and reviewed remotely by users whilst on site from different locations, accessed by head office or other users with the relevant permission, with professional looking certification and reports.

High resolution loop impedance testing

The MFT-X1 has extended the low end of the loop impedance range from 0.01 ohms to 0.001 ohms resolution and 50 kA current calculation. The True Loop impedance measurement using the patented confidence meter makes these low impedance measurements a realistic option, with two wire test connections and high current testing.

RCD custom testing

RCD testing can now be optimised with the RCD test configurator. Select a whole suite of tests or only those elements of the RCD you require. You can even add ramp testing to the sequence, optimising and simplifying testing.

EV Charge point testing

Suitable for both EV charger installation testing with either RCD Type B or RDC protected charge points. The MFT-X1 in conjunction with the Megger EVCA adaptor can test all known EV chargers for installation or maintenance.

Stabilised insulation test voltage

For the first time in any multifunction tester, the MFT-X1 incorporates a stabilised insulation test voltage, ensuring output voltage is accurate to within +/-2% +2 digits. This compares to the industry standard of +20% and so provides a more accurate test voltage without the risk of over-voltage damage to circuits or sensitive components.

Current measurement

The MFT-X1 uses current clamps for current measurement using the optional Megger MCC1010* current clamp for measurement of AC currents from 1 mA to 1000 A.

*Optional accessory

Customer upgradeable operating system

The operating system of the MFT-X1 range is upgradable by the user, simply by downloading the latest operating system file (.BIN) from the Megger web site to a suitable microSD card.

Insert the updated microSD card and pressing TEST initiates an automatic update process without the need for further user intervention.

Display and user interface

The user interface utilises the flexibility of the high contrast 480 x 272 colour, TFT bonded display, with a monochrome black on white mode designed specifically for use in difficult lighting conditions.

Enhancing the colour coded test selection rotary dial, range selection is now replicated on the instrument screen, ensuring easy use in poor lighting environments. Hot keys for second level functions are clearly shown across the top of each screen and the second control dial provides users with a further quick selection option of any highlighted feature, even if wearing protective gloves.

Relevant information is clearly shown on the display, both before and after each test, in full colour, and includes the Confidence MeterTM progress bar, RCD ramp test progress as well as the insulation and continuity measurement bar graph. The new Voltage Widget, displays the L-N, L-E and N-E voltages.

Li-ion or AA Alkaline battery solution

The Megger MFT-X1 is powered by the Megger Li-ion battery pack. The unique 4 Ahr rechargeable Li-ion battery provides the fastest and most flexible battery change solution in the industry. Alternatively an AA Alkaline adaptor is available as an optional accessory.

APPLICATIONS

The primary application is the testing of low voltage electrical installations in domestic, commercial, and industrial installations for single and three phase systems.

The wide range of test capabilities extend the use of the MFT-X1 to include:

- EV charge point testing
- Domestic PV testing
- Motor/Generator testing
- Machine testing
- Portable appliance safety testing
- Panel building and switchgear manufacturing
- Cable testing

Graphical assistance

The instrument has context help to provide graphical circuit connection guidance for each of the measurements.

Accessories

The MFT-X1 is shipped in a rugged, weather-proof carry case offering outstanding protection and flexible storage. Also included is a complete set of test leads to meet the wide range of connection challenges in modern electrical systems.

Loop 2-Wire - No RCD (L-PE, L-N or L-L)

| Function | Range | Accuracy |
|------------------|-----------------|----------------|
| 2-Wire HR | 0.001 – 9.999 | ±2% ±0.030 Ω |
| | 0.01 Ω – 9.99 Ω | ±2% ±5 digits |
| 2-Wire | 10.0 Ω – 99.9 Ω | ±10% ±5 digits |
| | 100 Ω – 1999 Ω | ±10% ±5 digits |
| Supply Voltage | 48 V – 550 V | |
| Supply Frequency | 45 Hz – 65 Hz | |
| | | |

Can be used to measure supply source resistance quickly and reliably between Line and PE or two Live conductors up to 550 V.

EN61557-3 Measurement Range: 0.30 Ω to 1999 Ω

Loop 2-Wire L-PE with RCD

| Function | Range | Accuracy |
|------------------|-----------------|----------------|
| | 0.01 Ω – 1999 Ω | ±10% ±5 digits |
| Supply Voltage | 48 V – 2 | 80 V |
| Supply Frequency | 45 Hz – 6 | 55 Hz |
| | | |

Note: Uses the Megger Confidence Meter to measure the supply source impedance of circuits protected with an RCD rated ≥30 mA when there are only two connections possible. When a neutral is available the three-wire test will provide a quicker, more accurate result.

Note: RCD may trip if there are high leakage currents in the circuit under test. This measurement is immune to the effect of inductance found in some RCDs as it measures resistance (RCD Uplift).

EN61557-3 Measurement Range: 1.00 Ω to 1999 Ω

Multifunction tester

Loop 3-Wire L-PE with RCD

| Designation | Test Current | Application |
|-------------|--------------|--|
| RCD | 15 mA | For circuits protected by an RCD rated <= 30 mA |
| RDC EV | 3 mA | For EV charger circuits protected by a RDC and a Type A RCD rated <= 30 mA |
| | | |

| Function | Range | Accuracy |
|------------------|------------------|----------------|
| | 0.01 Ω – 9.99 Ω | ±2% ±5 digits |
| | 10.0 Ω – 199 9 Ω | ±10% ±5 digits |
| Supply Voltage | 48 V – 280 V | |
| Supply Frequency | 45 Hz – 65 Hz | |
| | | |

Note: Uses the Megger Confidence Meter to measure the supply source impedance of circuits protected with an RCD when three connections are possible. The L-N Loop resistance needs to be less than 12 Ω . The resistances of the L-PE, L-N and N-PE loops are all shown, and the accuracy of the L-PE resistance depends on the maximum resistance displayed. When the neutral is not available the two-wire test must be used.

Note: RCD may trip if there are high leakage currents in the circuit under test. This measurement is immune to the effect of inductance found in some RCDs as it measures resistance.

EN61557-3 Measurement Range: 1.00 Ω to 1999 Ω
