LAUDA Variocool

Circulation chillers for variable use in laboratory, mini-plant and production for temperatures from -20 up to 40 °C

Application examples

- Central cooling water supply in laboratories
- Cooling of analytical devices
- Temperature control of bio-reactors
- Supply to cooling traps

Numerous options, compact design, easy operation

The **LAUDA Variocool** circulation chillers offer a broad performance spectrum for demanding temperature control tasks. The color TFT screen makes operation easy. A USB interface and an alarm contact are integrated as standard features. Additional interfaces are available as accessories. They are located in the front of the device, which means they are easy to access.

The circulation chillers with their multitude of options are very well suited to a number of different areas of application. Optional pumps, for example, enable higher supply pressure. Optional heating units, which are adapted to the cooling capacity, enable the quick heating of the connected application when needed.

Your advantages at a glance

The Variocool advantages

Your benefits

- 13 models in air or water-cooled design with cooling capacities from 600 W up to 10 kW
- All models with electronic expansion valve
- Due to their compact design, units up to 2 kW of cooling capacity can be placed under the laboratory table

- The appropriate solution to every requirement
- Good temperature control and cost savings thanks to reduced energy consumption
- Saves valuable lab space

- Display and operation via color TFT screen and membrane keyboard
- Electronic fill gauge on the display and low level alarm when fluid level too low

- Easy and clear setup options
- Early detection of insufficient fluid

- Options:
 - high power pumps
 - heaters
 - flow control
 - outdoor installation
 - use with DI water
 - noise reduction

- Flexible customization to applications

- USB interface and alarm contact standard features in the front of the device
- Retrofittable interfaces as accessory:
 - analog module
 - RS-232/485 interface
 - contact modules
 - profibus module
 - Pt100/LiBus module

- Easy accessibility
- Flexible control options

- Front grid can be easily removed without tool
- Tower design for larger models (from VC 7000)
- Microchannel condensers in all air-cooled models
- All models (except VC 600) with adjustable bypass and pressure gauge

- Easy to clean condenser
- Space-saving setup
- Reduced footprint and lower refrigerant quantity
- Connection of pressure sensitive applications

LAUDA Variocool

Variocool Circulation chillers with cooling capacities up to 2 kW

Variocool circulation chillers function in an operating temperature range of -20 to 40 °C. Optional heaters can be added to increase the maximum temperature to 80 °C. For greater pressure requirements, optional pumps are available with the VC 1200 version or higher. With the exception of the VC 600, all models are also available as water-cooled versions. All devices are equipped with lockable casters. The compact dimensions of the models from VC 600 to VC 2000 (W) allows to place them under the laboratory table.

Circulation chiller VC 600

All types

Pump characteristic Heat transfer liquid: Water

Temperature range

-20...40 °C (-20...80 °C with optional heater)

Included as standard

USB interface · alarm contact

Included accessories

nipples · screw caps

Options

High-power pumps* · heater · flow control · outdoor installation · DI water compatibility

* Using such a pump can change the available cooling capacity, and causes a change of the height of the housing from 650 mm to 790 mm for VC 1200 (W) and VC 2000 (W) ** 220 V; 60 Hz

Variocool

Circulation chillers with cooling capacities up to 5 kW

The models VC 3000 and VC 5000 offer cooling capacities of 3 and 5 kW. They are also available in water-cooled design (W). For flexible adaptation to different applications the chillers can also be delivered with optional high-power pumps or heaters. Further options are a flow control, outdoor installation or a noise reduction for the types VC 5000 and VC 5000 W.

LAUDA Variocool

Variocool Circulation chillers with cooling capacities up to 10 kW

The highly efficient tower design circulation chillers provide cooling capacities between 7 and 10 kW. Options like heating or high-power pumps add to the devices' areas of application. The models are available in air or water-cooled design. All models are equipped with casters which can be controlled and locked.

Options Variocool

For all Variocool models, different options can be ordered. The options can only be fitted ex-works. Please check the table below for compatibility of options with the regarding circulation chiller type.

Pump characteristics optional pumps Heat transfer liquid: water

Options

Heaters	For all types. Extension of the temperature up to 80 °C.
High-power pumps	For all types, except VC 600.
Flow control	For all types.
Outdoor installation	For all types. An additional protection with a roof is necessary.
DI water	For VC 600 to VC 2000 W. Corrosion resistant construction for use with deionized water.
Noise reduction	For models VC 5000 up to 10000 W.

Options – not power supply dependent
