The updated 2500A225D is a solid-state, Class A design, self-contained, air-cooled, broadband power amplifier. It is designed for applications requiring high gain, linearity, and instantaneous bandwidth, providing a minimum of 2.5 kW of RF power. The amplifier is equipped with protection from input overdrive beyond 0 dBm, as well as protection from various failure conditions including over-temperature and power supply faults.

Operational status and fault conditions are indicated on the front panel display. The amplifier control functions and status indications are accessible remotely using GPIB/IEEE-488, RS-232, fibre-optic serial, USB, or Ethernet. The interface connectors are located on the back panel, and local and remote operation can be managed using a switch on the front panel.

Standard RF sample ports allow for forward and reverse power monitoring. This high-power Class A amplifier is ideal for EMC test applications due to its low level of spurious signals and linearity. It can continue operation into high VSWR loads.

The export classification for this equipment is EAR99. These commodities, technology, or software are controlled for export in accordance with the U.S. Export Administration Regulations. Diversion contrary to U.S. law is prohibited.
